

Journal of AIDS & Clinical Research

OMICS Publishing Group

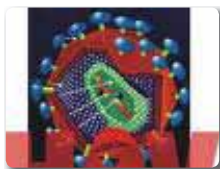

*An Open Access Publisher for the
Advancement of Science & Technology*

<http://omicsonline.org/jarhome.php>

Open Access intends to take away the barriers to disseminating research by making research freely accessible online, soon after publication. Journal of AIDS & Clinical Research under open access category is a peer-reviewed journal, aims to provide the most complete and true source of information on "on-going" developments in the field. An additional benefit of an Open Access, online journal is enormous cost savings for libraries and institutions in terms of the high subscription rates and archival of the old journals.

The main purpose as well as the objective of the Journal of AIDS & Clinical Research is to provide an incomparable platform where both research and clinical science can be studied side by side to celebrate, design, and develop applications of basic science in preclinical or clinical research on AIDS. The journal covers studies and research on experimental; clinical; therapeutic; pathogenesis; vaccines; drug resistance; diagnosis and virology on AIDS.

The Journal of AIDS & Clinical Research will comprehend all aspects of basic and clinical science that have impact on slaking the spread of AIDS. It is a multidisciplinary journal that aims to keep scientists, clinicians, researchers, students and general public to know and to spread the latest research on HIV.
