OMICS GROUP

OMICS Group International through its Open Access Initiative is committed to make genuine and reliable contributions to the scientific community. OMICS Group hosts over **400** leading-edge peer reviewed Open Access Journals and organizes over **300** International Conferences annually all over the world. OMICS Publishing Group journals have over **3 million** readers and the fame and success of the same can be attributed to the strong editorial board which contains over **30000** eminent personalities that ensure a rapid, quality and quick review process. OMICS Group signed an agreement with more than **1000** International Societies to make healthcare information Open Access.

OMICS Journals are welcoming Submissions

OMICS Group welcomes submissions that are original and technically so as to serve both the developing world and developed countries in the best possible way.

OMICS Journals are poised in excellence by publishing high quality research. OMICS Group follows an Editorial Manager® System peer review process and boasts of a strong and active editorial board.

Editors and reviewers are experts in their field and provide anonymous, unbiased and detailed reviews of all submissions.

The journal gives the options of multiple language translations for all the articles and all archived articles are available in HTML, XML, PDF and audio formats. Also, all the published articles are archived in repositories and indexing services like DOAJ, CAS, Google Scholar, Scientific Commons, Index Copernicus, EBSCO, HINARI and GALE.

Editor-in-Chief

Journal of Geophysics & Remote Sensing

Dr. Filippos Vallianatos

Professor
Technological Educational Institute of Crete
Laboratory of Geophysics & Seismology
University College London
United Kingdom

CITY UNIVERSITY LONDON

Biography

Dr. Filippos Vallianatos is a Professor of physics from Geophysics-Solid Earth Physics, Technology Educational Institute of CRETE, School of Natural Resources & Environment, Department of Geoenvironment, Laboratory of Geophysics & Seismology & Senior Research Fellow in Geophysics. He received his degree in Physics. With Honours, from University of Athens, Physics Department from 1981-1985. He has done his PhD in Geophysics-Solid Earth Physics (University of Athens, Physics Department). The title of my PhD thesis is "Magnetotelluric investigation of the electrical conductivity in the areas of Thiva and Ioannina (Greece)".1985-1989. He has done his Postdoctoral researcher, Department of Solid Earth Physics, University of Uppsala from 1989-1990. He collaborated with the Dept. of Seismology of the University of Uppsala for the installation of seismological and magnetotelluric stations at various sites in Greece (1986).

Research Interest

Telluric & electromagnetic earthquake precursors, Electromagnetic wane propagation in geostructures with stochastic or fractal properties, Conductivity structure of the Earth using Electromagnetic waves, Thermodynamics of the Earth Interior, Seismic Hazard and Environmental Seismology, Non linear dynamics in seismology and geophysics, **Environmental Geophysics and GeoHazards**.

Environmental Geophysics and GeoHazards

Geohazards take an increasing toll of lives, disrupt livelihoods and cost more more money each year

Natural and Human-Induced Extreme Events

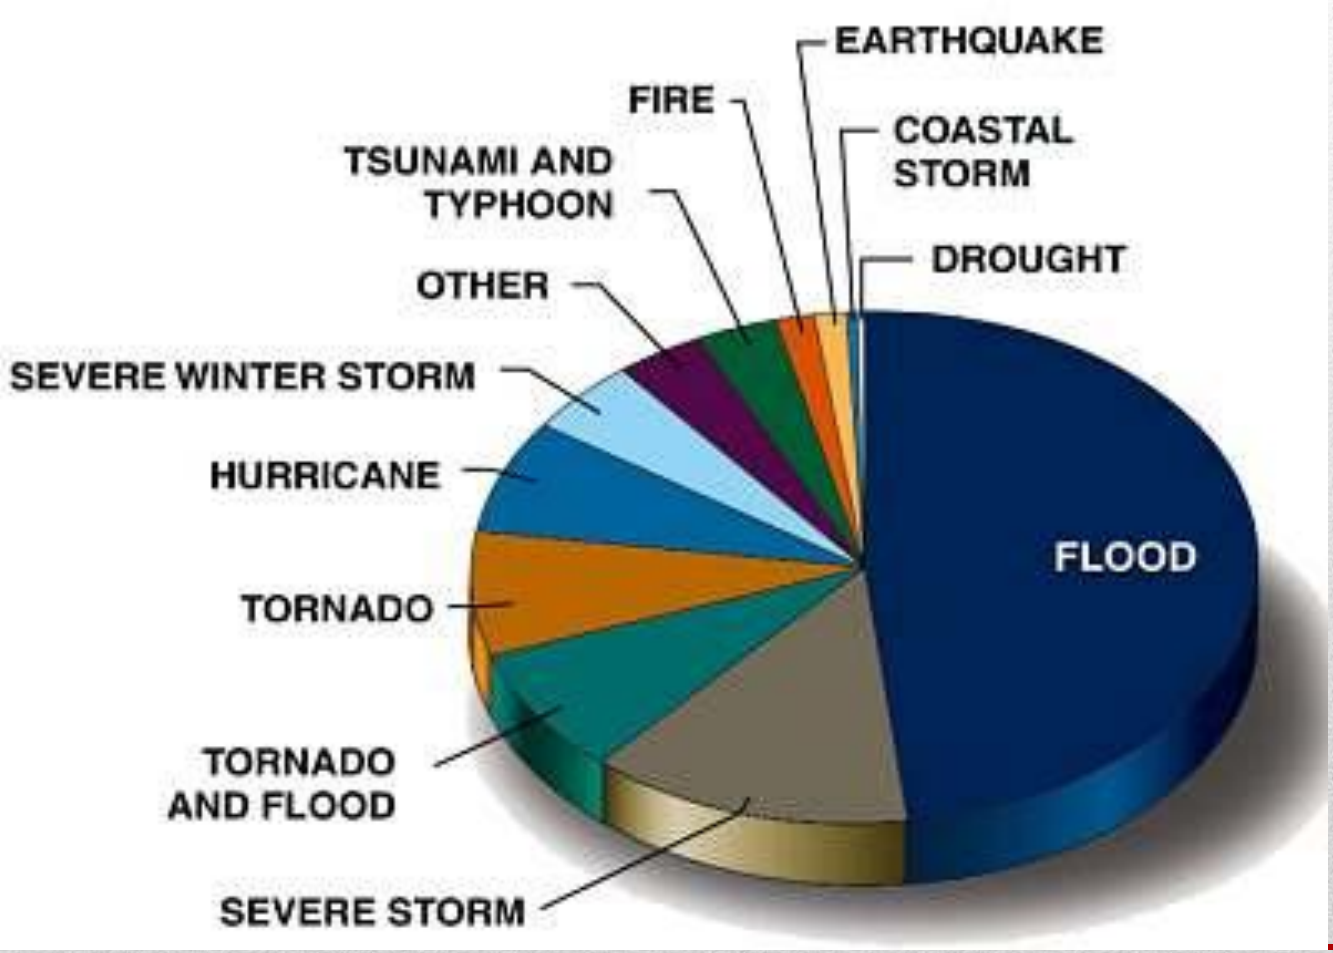
GEOHAZARDS
- Volcanoes
- Earthquakes and Tsunamis
- Landslides/Mudslides

CLIMATIC HAZARDS
- Floods
- Drought
- Hurricanes/Cyclones

INDUSTRIAL/OTHER HAZARDS
- Oil Spills
- Nuclear Accidents
- Meteor Impacts

Phuket, Thailand: Before and after the 2004 tsunami

Cost Breakdown of Disasters



Natural and Human-Induced Extreme Events

- Extreme events, whether natural or human-induced, can cause significant environmental change, not to mention their devastating impacts on peoples' lives

- In 2005, there was an 18% rise in disasters that killed 91 900 people

- There were 360 natural disasters in 2005 compared to 305 in 2004: the number of floods increased by 57% in 2005 and droughts by about 47%

- The 2004 Indian Ocean tsunami accounted for 92%, and the 2005 South Asian earthquake, for 81% of the deaths in each respective year

Volcanoes

- About 550 volcanoes have erupted in the Earth's recorded history and an equivalent number of dormant volcanoes have only erupted in the past 10 000 years
- On any given day, about ten volcanoes are actively erupting
- Explosive eruptions give little warning, while effusive eruptions, which send out gently flowing lava, allow time for people to escape

Floods

- Worldwide, the number of major flood disasters has grown significantly, from 6 cases in the 1950s to 26 in the 1990s
- From 1971 to 1995, floods affected more than 1 500 million people worldwide
- In the most calamitous storm surge, a flood in Bangladesh in April 1991 killed at least 138 000 people and left 10 million homeless

Hurricanes and Cyclones

- Scientists predict that global warming will cause warmer ocean temperatures and associated increased moisture in the atmosphere - two variables that work to power hurricanes. As a result, more intense hurricanes that can cause even more damage when they hit land are predicted

- Large parts of densely populated coastal areas are subject to the inundation caused by hurricane storm surges; on numerous occasions, they have experienced heavy economic losses from these events

Earthquakes and Tsunamis

- According to long-term records (since about 1900), we can expect about 18 major earthquakes (7.0 - 7.9 on the Richter scale) and one great earthquake (8.0 or above) in any given year
- The number of earthquakes and tsunamis resulting in fatalities has increased approximately in proportion to global populations
- The growth of giant urban cities near regions of known seismic hazard is a new experiment for life on the Earth
- Tsunamis are a threat to life and property for all coastal residents

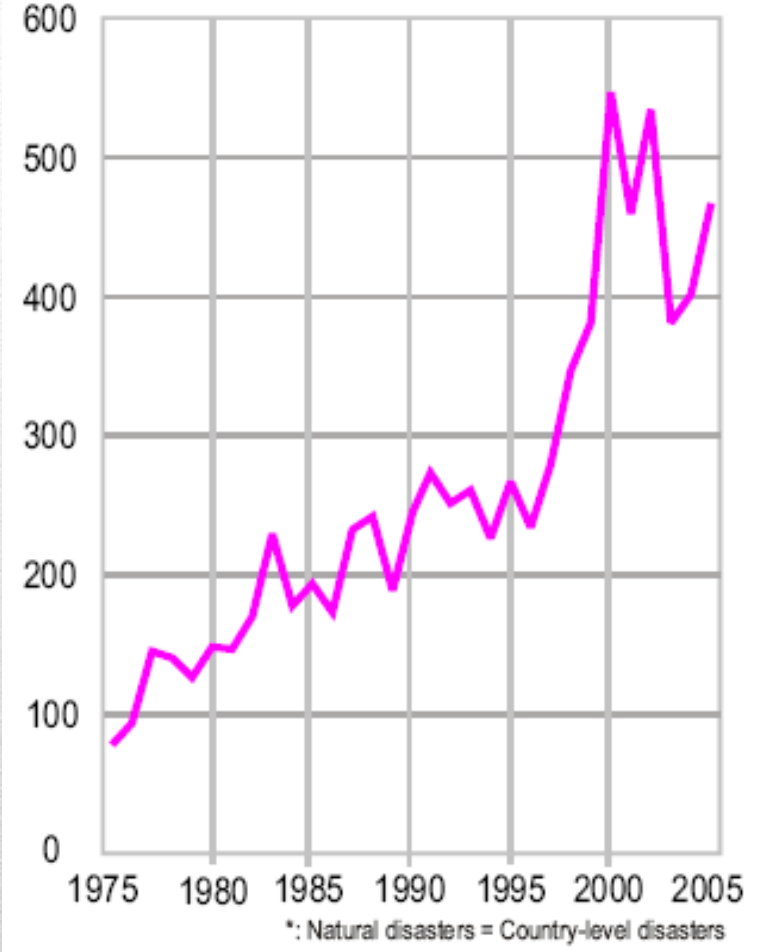
Most destructive known earthquakes in the World

Date	Location	Deaths	M	Comments
January 23, 1556	China, Shansi	830,000		
July 27, 1976	China, Tangshan	255,000 (official)	8	Estimated death toll as high as 655,000.
August 9, 1138	Syria, Aleppo	230,000		
May 22, 1927	China, near Xining	200,000	8.3	Large fractures.
December 22, 856	Iran, Damghan	200,000		
December 16, 1920	China, Gansu	200,000	8.6	Major fractures, landslides.
March 23, 893	Iran, Ardabil	150,000		
September 1, 1923	Japan, Kwanto	143,000	8.3	Great Tokyo fire.
October 5, 1948	USSR (Turkmenistan, Ashgabat)	110,000	7.3	
December 28, 1908	Italy, Messina	70,000 to 100,000	7.5	Deaths from earthquake and tsunami.
September, 1290	China, Chihli	100,000		
November, 1667	Caucasia, Shemakha	80,000		
November 18, 1727	Iran, Tabriz	77,000		
November 1, 1755	Portugal, Lisbon	70,000	8.7	Great tsunami.
December 25, 1932	China, Gansu	70,000	7.6	
May 31, 1970	Peru	66,000	7.8	Great rock slide, floods.
1268	Asia Minor, Silicia	60,000		
January 11, 1693	Italy, Sicily	60,000		
May 30, 1935	Pakistan, Quetta	30,000 to 60,000	7.5	Quetta almost completely destroyed.
February 4, 1783	Italy, Calabria	50,000		
June 20, 1990	Iran	50,000	7.7	Landslides.

Earthquakes with 1,000 or more deaths from 1998 to 2001

Date	Location	Latitude	Longitude	Deaths	M	Comments
Feb 04, 1998	Afghanistan-Tajikistan Border Region	37.1 N	70.1 E	2,323	6.1	818 injured, 8,094 houses destroyed, 6,725 livestock killed.
May 30, 1998	Afghanistan-Tajikistan Border	37.1 N	70.1 E	4,000	6.9	Many thousands injured and homeless.
Jul 17, 1998	Papua New Guinea, Near N. Coast	2.96 S	141.9 E	2,183	7.1	Thousands injured, about 9,500 homeless and about 500 missing as a result of a tsunami with maximum wave heights estimated at 10 meters.
Jan 25, 1999	Colombia	4.46 N	75.82 W	1,185	6.3	Over 700 missing and presumed killed, over 4,750 injured and about 250,000 homeless.
Aug 17, 1999	Turkey	40.7 N	30.0 E	17,118	7.4	At least 50,000 injured, thousands homeless. Damage estimate at 3 to 6.5 billion USD.
Sep 20, 1999	Taiwan	23.7 N	121.0 E	2,297	7.6	Over 8,700 injured, over 600,000 homeless. Damage estimate at 14 billion USD.
Jan 26, 2001	India	23.3 N	70.3 E	19,988	7.7	166,812 injured, 600,000 homeless.

Time trend of natural disasters, 1975-2005*



UN International Strategy for Disaster Reduction (2006). 2005 Disasters in Numbers

15 Most Costly Years

Year	*Total Losses ($ billions)*	*Fatalities*
2005	100.4	399
1994	28.9	245
2004	27.2	337
1989	18.8	358
1998	18.3	672
1995	17.0	1,526
1993	16.6	216
1980	15.8	864
2001	14.8	445
1999	14.0	912
1996	12.8	533
1997	12.1	582
1979	11.4	316
2000	10.1	478
2003	10.0	422

Hazards & Vulnerabilty Research Institute (2006). 2005 U.S. Hazard Losses. University of South Carolina.

Kanto earthquake (Tokyo) 1.09.1923, M=8.2

Kobe earthquake (Japan) 16.01.1995, M=6.8

Spitak earthquake (Armenia) 7.12.1988, M=6.8

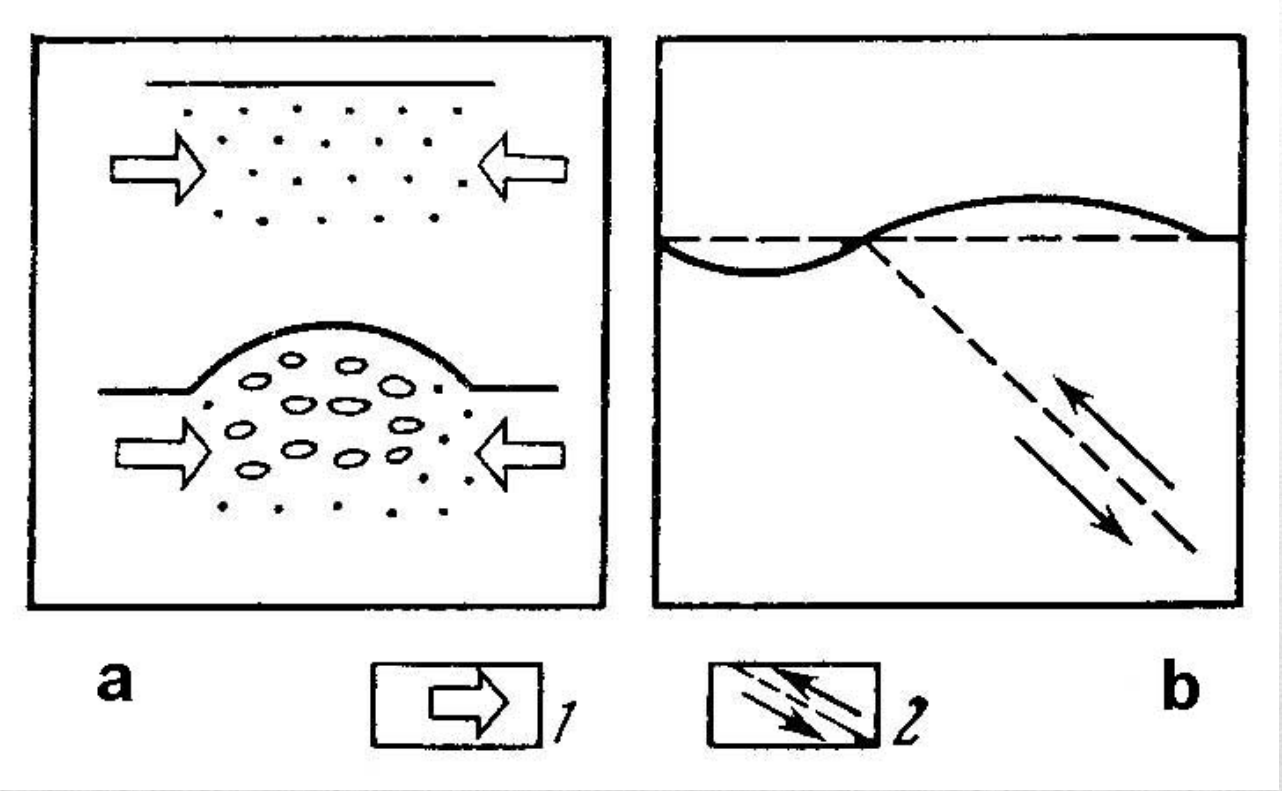
Izmit earthquake (Turkey) 17.08.1999, M=7.8

Surface displacement for radar data

- Mantle convection theory, continent drift theory, as a base of horizontal and vertical movement of the earth surface.
- Earthquake mechanism theories: dilatancy theory, elastic rebound theory.
- Strong motion after the shock.



The model of ground displacement:
a - dilatancy model; **b** - elastic rebound theory.
1- stress, 2- cleavage stress.

Satellite and In-situ observations

Satellite observations	In-situ observations
Ground displacement before the shock	Tilt, strain, GPS, water level
Allweather surface temperature	Meteorological observations
Ion density and temperature in F-layer, 180-300 km	EM ground observations
Gas concentration	Gas concentration
Oxygen luminescence	Oxygen luminescence
Atmospheric temperature, pressure and humidity	Meteorological observations
Aerosol	Aerosol
