Dear Mr Das,

Re Indexing for the Journal of Clinical and Experimental Cardiology

It is a pleasure to write this letter of support for the indexing of the JCEC and I would like to lend my support to the indexing of this new journal, the Journal of Clinical and Experimental Cardiology. The field of Cardiology requires rigorous experimental proof and manuscripts on Cardiovascular research require careful review with honorable and transparent review processes. JCEC provides articles on areas of new and advanced treatment strategies, diagnostic approaches and screening, molecular approaches in advanced interventional Cardiology and Cardiovascular Thoracic surgical approaches in treating cardiovascular diseases. The journal commits to maintaining the high level of scientific and clinical content as the primary consideration. With a vision of providing substantial quality and original experimental research

The Journal of Clinical and Experimental Cardiology intends to improve publishing quality, upholding standards on all levels. The peer review process ensures that there is scientifically rigorous, and rapid review processing with the assistance of the Editorial Manager® System. The journal processes articles through hard core International scientific professionals and provides up-to date research highlights to the scientific community.

JCEC promises to blaze new trails into Cardiovascular clinical and experimental research and to provide original and innovative research studies. In my opinion this journal has developed an

The Foundation for The Gator Nation

An Equal Opportunity Institution

independent identity and is providing a new site for submission and publishing of original research studies, both basic and clinical research.

Sincerely yours;

Alexandra Lucas, MD, FRCP(C)
