

Journal of Food Processing and Technology

From its first issue published in 2010, the Journal of Food Processing and Technology is offering a good scientific window from where, food scientists and food technologists from either academic or professional organizations, can see their research, development and innovation being disseminated throughout the world. The journal offers a wide platform of applications in food sciences and processing, among which we can cite the application of science to the selection, preservation, processing, packaging, distribution, and use of safe, nutritious, and wholesome crops, minimally and processed crops, as well as food products. The journal also offers a platform to those who are involved in the development of ways to process, preserve, package, or store food, according to consumers, industry and government specifications and regulations. Because consumers are aware of the vast array of food technology and processing to deliver tasty, nutritious, safe, and convenient foods, the journal also offers a good insight to them for additional information on what they have on their table, how it was obtained in the factory, and what technology was used to process it including the ingredients. Furthermore, The Journal of Food Processing and Technology is the ONLY journal that focuses and is exclusively devoted to food processing and technology making data research easier, one of the reasons that make readers accessing more JFST.

To reach this stage and gain the consideration of the scientific community, the professionals and the common readers interested by the discipline, the editorial board members and journal staff have worked very hard for the journal to establish its high professional standing and there by recommending this journal to be indexed in indexing platforms.
