Sub: Recommendation letter for the support of the PMC indexing of Journal of Cancer Science & Therapy.

It is my greatest pleasure to write a letter in the support of the PMC indexing for Journal of Cancer Science & Therapy.

I am Toxicologist Specialist and majority of my time expends in the professional practice for the Safety Toxicology of Industrial products/materials in US and Globally. My major responsibilities are centered in design and manage toxicological research experiments, interpretation of results and translated further for understanding of human health and environmental safety under various regulatory requirement in US and Globally.

I am affiliated as Editorial board member of this journal since it was started first publication. I periodically review manuscript and write editorial comments for the manuscript submitted for quality publications in cancer research areas i.e. mechanism of carcinogenesis and cancer therapy. I have also written few review articles for this journal on inflammatory mechanism in carcinogenesis process which was highly looked and cited by the scientific community.

I have found this journal attracted high level of cancer research professionals in a very short period of time and publish quality manuscripts. I also found that hard working editorial board office staff not only helping this journal to continue grow but also helping to best serve up to higher levels.

With all these abilities, I am confident that Journal of Cancer Science and Therapy has immense potential to prove a platform for high quality research publication in Cancer Disease. I strongly recommend this journal to be part of PMC indexing for Pub Med citation. Please feel free to contact me if you have any question about Journal of Cancer Science and Therapy.

Warm regards,

Sincerely,

Rajendra K Singh, PhD

Toxicology Specialist

Dow Corning Corporation

Midland, MI 48611

Editorial Board member Journal of Cancer Science and Therapy
