Re: Support Journal of Genetic Syndromes & Gene Therapy to be indexed in PubMed

Dear Officer,

By writing this letter I highly recommend the Journal of Genetic Syndromes & Gene Therapy to be indexed in PubMed.

The Journal of Genetic Syndromes & Gene Therapy is an international, open access, peer-reviewed scientific journal which emphasizes at the documentation of phenotype analysis, birth defects, linking genetic variations to disease, genetics of complex disease, management/intervention of genetic diseases, and novel therapies for genetic diseases. Since it was first launched, the journal has managed to achieve high standard publications in the aforementioned fields. As a result of this work, the journal has presented with an unofficial 2012 impact factor of 5.89, suggesting the significant academic impact this journal has brought about.

The editorial board members and journal staff have been working together enthusiastically and diligently to establish the journal's high professional standing and reputation. It is highly expected that if the journal is indexed in PubMed, its academic impact would be further increased significantly. Thus, I strongly recommend the journal be indexed in PubMed.

Thank you in advance for consideration!

Sincerely,

A handwritten signature in blue ink, appearing to read 'Yujing Li'.
