Correcting animation deformity of the breast

Hilton Becker
Hilton Becker M.D. - Clinic of Plastic Surgery, USA

When a breast implant is placed beneath the muscle, some degree of implant movement or even distortion can be seen. Patients who are athletic find this particularly bothersome and seek correction. The technique of correction will be discussed and representative patients will be shown during the presentation.

Biography

Hilton Becker is a certified Plastic Surgeon by American Board of Plastic Surgery, and is in practice since 1981. He received his medical degree from Virginia Commonwealth University-Medical Center, Johannesburg, South Africa, and completed his plastic surgery residency at the Medical College of Virginia. He specializes in reconstructive and cosmetic surgery of the breasts, facial rejuvenation, and liposuction. He has developed several medical patents, including the Becker Adjustable Breast Implant and the Becker Dissector Liposuction Cannula and a complete line of natural skin care products, always keeping the patient’s best interest in mind. He is the recipient of many awards, most notably named one of Good Housekeeping’s top Breast Cancer Reconstructive Surgeons in 1989. He remains dedicated to his cancer patients around the world. His philosophy is to exceed his patients’ needs and expectations to ensure they always receive the highest standard of care.
