Forensic Science research in India- An overview
Parveen Kumar Janjua
Forensic Science Development & Welfare Society, India

The forensic science setup in India is very old. The first Chemical Examiner's laboratory was established in the year 1849. The government examiner of documents was established in 1904 at Shimla. The credit of using fingerprints and related research also is credited to Indian forensic setup, the roots of which were in Kolkata, the headquarters of the British rule. Today we have seven Central Forensic Science Laboratories, Thirty state Forensic Science Laboratories and Approximately fifty regional forensic science laboratories. These organizations have a work force of 2500 technical personnel and they handle 0.2 million cases per year and there is a backlog of approximately same quanta. The investments in pure research in forensic science are very low and applied research on investigation related problems are also very low the central laboratories deal with such research under the command and control of the Directorate of Forensic Science Services, Government of India. Beside these laboratories only seven Indian Universities are taking up the Research in the various fields of Forensic Science, In this paper I have also tried to collate the details of the research during the last one decade and future plans for forensic research.
