

2nd International Conference and Expo on

Novel Physiotherapies

June 09-11, 2016 London, UK

Mikel H-G Hoff

Ludwig Maximilian University of Munich, Germany

The nervous system and its ability to control and prioritise our resources in pain and inflammation rehabilitation

It has been known for decades that the body communicates with the use of frequencies, but is it electric or radio frequencies, or a mix? Do various body functions work on different frequencies? When we are injured or get an illness, it is known that some frequencies become weak and the signal strength decreases. Why? Also sport achievements stress the body and cortisol and other necessary hormones are released, which courses free radicals to be formed in a larger scale. It also activates the body's defense mechanism resulting in the antioxidants fighting the free radicals. All which have a positive effect as they release energy in the proteins. As our body is one system and cannot prioritize several things at once, does it mean that the nervous system reprioritize our resources? What happens if it becomes possible to strengthen the frequencies in the body that are not strong enough or not responding as intended? Injuries and chronic pain: can this be healed/stopped by directing the body's focus, strengthening frequencies and thereby increase the healing process? Answer yes. Scientists have known for decades that this is possible in theory, but till now such therapy has not been available. Mikel H-G Hoff has spent 3 to 5 years developing this groundbreaking Amino BioFrequency Therapy which is so far developed for performance enhancement, pain & inflammation and chronic pain treatment.

Biography

Mikel H-G Hoff has completed his PhD 25 years ago from LMU Faculty of Medicine in Munich in International Medical Biochemistry carried out on diverse range of universities through out EU. He has worked with German and Italian tennis professionals on the ATP tour as Coach, Manuel Therapist and Mental Trainer. Further, he had tennis schools in Spain and Portugal. He is an educated Sports Performance Psychologist, Manuel Therapists with speciality in nervous system and the body's biochemistry reaction. He is the Founder and Inventor of Amino BioFrequency Therapy/AminoAcademy.com owned by Amino HealthCare ApS in Denmark.
