An overview of the Ayurvedic system of Herbology and the role of herbs in the treatment of cancer

Marc Halpern
California College of Ayurveda, USA

Ayurveda is arguably the oldest, intact, system of medicine in the world. With origins in the earliest writings of the Rig Veda, the knowledge of Ayurveda dates back nearly 5000 years. As Ayurveda evolved in India, it influenced many other systems of medicine including; traditional Chinese Medicine, Tibetan Medicine and the ancient Greek system of Medicine. For this reason, Ayurveda has been stated to be the Mother of all Systems of Healing. Ayurveda incorporates many modalities including dietary, lifestyle, herbal, ritual, color, aroma and massage and other body-centered therapies the herbal knowledge of Ayurveda is as old as the system of medicine itself with the earliest references to herbs found in the Rig Veda. This knowledge was expanded in the Yajur Veda and then compiled and expanded time and time again by later teachers. In addition to the herbal medicines and formulations found in the classical Ayurvedic texts (Caraka Samhita, Sushruta Samhita, Ashtang Hrdayam, Ashtang Samgraha, Sarangadhara Samhita, Madhava Nidanan, Cakradatta, Kashyap Samhita, etc.), there are innumerable family lineages of herbal knowledge. While Ayurvedic herbal knowledge is codified in the language of Sanskrit and applied to herbs from India, the knowledge of Ayurveda is applicable to herbs from any part of the World. Ayurvedic herbalism is way of understanding the usefulness of herbs. It is not limited to any location. Though herbs from India are often called "Ayurvedic", they only become Ayurvedic when used in accordance with the Ayurvedic system of medicine. Likewise, they may be approached through an understanding of the Chinese, Allopathic or any other system of medicine. My program will focus mostly on herbs from India that are useful in the treatment of cancer. I'll discuss both common and uncommon herbs. I’ll include a couple of Western herbs as well, but explore their use from the Ayurvedic perspective and demonstrate how this leads to a deeper understanding of the herb and how its usefulness can be refined. The program will begin with a quick overview of the Ayurvedic system of Herbology. This is called "Dravya Guna Vijnanam". This will allow me to discuss the herbs in the unique context of Ayurveda.

Aromatic medicines in integrative care

Mindy Green
Green Scentsations, USA

Aromatic plants (herbs and essential oils) have been used throughout history for healing, whether through pharmacy, cosmetic care, or spiritual practices. Modern science confirms that the chemical constituents found in essential oils have tremendous benefits, and are being used in medical systems abroad with wide ranging therapies from primary to palliative care, while the US falls behind in this innovative and science based modality. This lecture will focus on essential oil safety, dilution, application, and external uses. We will discuss the implications of olfaction in de-stressing, and provide material medica for ten functional essences derived from plants. Seeing the research and examples of how the rest of the world is employing them in integrative care is sure to provide a more thorough understanding of their benefits and the confidence to incorporate them safely and effectively into your personal life and professional practice.
