Customer experience management: A new approach to increase results and longevity of business

Adriana Arineli
International Iberoamerican University, Mexico

Dealing with intangible and so subtle experience, is unusual and a huge challenge for management that is not used to measure what has no numbers and maybe need to see beyond the obvious and accessible statistics. Recently, several studies point to the importance of CEM (Customer Experience Management). However, if the CEM is a strategy to focus at operations and processes of a business around the experiences of the customers to the company, it is essential to seek grants to structure it and find out their effectiveness. This study examines the issues involved in offering superior customer experiences. Through research it was possible to analyze the aspects that impact on productivity and perceived quality. It can be concluded, that CEM can be used as a guideline matrix management in decision making to promote superior customer experiences. Even assuming that it is defiant see beyond the obvious, maybe this is the necessary opportunity, to create real competitive advantage and longevity for companies that want to stand out and be successful over time.
