Study for the strategic development of green supply chain management

Manpreet Singh*, Manjinder Bajwa and Mahipal Singh
Lovely Professional University, India

Green supply chain management is the powerful innovation to enhance the capabilities of supply chain and to differentiate from its competitors for the industry. The waste and emissions caused in the supply chain process are the main sources for environmental problems such as global warming and acid rain. In this study, the efforts are made by the authors to enhance the strategic development of supply chain of the system for the buyer-seller relationship by using different strategies. The research indicates that the use of green procurement, green manufacturing, green distribution and reverse logistic helps to improve the both economic and environmental performance.
