Early treatment in orthodontics

Sameer Kumar
Gulf Medical University Ajman, U.A.E

SYNOPSIS: Early treatment is the treatment initiated during the primary or mixed dentition with the purpose to prevent, intercept or correct a specific orthodontic problem or problems, also known as, Phase I treatment.

Overall goal of early treatment

To improve or correct orthodontic problems that would result in:

- Irreversible damage to the dentition and supporting structures
- Progression into a more severe orthodontic problem that would be more difficult to treat

Specific goals of early treatment

1. Improved Psychosocial Development Self-Esteem, esthetics
2. Improved Occlusal Function Symmetry, shifts/slides, attrition
3. Manage potential for damage to dentition Trauma, attrition, recession, injury, primary tooth extractions.
4. Phase II simplification Growth modification, space management, primary tooth extractions
5. Improved or corrected skeletal discrepancies Symmetry, reduce skeletal discrepancies, transverse problems.
