Importance of *hijamah* (cupping therapy) in the current health scenario

**Sharique Zafar**

Holistic Health Care and Research Organization, India

The Hijamah (Cupping) is an ancient method of treatment in which a jar is attached to the skin surface to cause local congestion through the negative pressure. It has been practiced in the treatment and cure of broad range of conditions by the Chinese and Arab physicians and therapists for thousands of years. In Islamic world it is an authentic tradition of the Prophet Muhammad (PBUH) that is still followed as Hijamah by the Muslims throughout the world. In China, it has been claimed for warming and promoting the free flow of *chi* or *qi* and blood in the channels. The technique of cupping has been improved by the time from hollowed animal horns to bamboo cups, which were replaced by glass cups. Recently plastic magnetic cups, rubber and metal cups are available with vacuum pumps in different sizes and shapes.

Findings of experts suggested that cupping is effective to promote well-being and effective for pain, inflammations, musculoskeletal disorders, visceral dysfunctions, gynecological, neurological and psychosomatic ailments, varicose veins, lymphatic blockages, deep tissue problems, blockages of life force and energy channels etc. Different aspects of Hijamah like introduction and history; apparatus, techniques, areas, points, preconditions, preparations, indications, benefits, efficacy, contraindications, precautions, post Hijamah procedures, recent researches, our experiences etc. shall be discussed in the presentation.

**Biography**

Sharique Zafar is a Professor, researcher, trainer, writer, editor, socio-medical activist, research guide, qualified as M.D. Unani Medicine, Ph.D. Ayurveda. President of the Holistic Health Care & Research Organization. Has teaching and training experience of more than 22 years.
