Therapeutic acupunctural resonance

Adrian Angel Inchauspe
National University of La Plata, Argentina

In the previous edition of the Traditional Medicine Conference held at Beijing, the actual possibility of the so called Five-Element Theory had, in fact, a precise foundation—which finds support in accurate propositions stated long ago by Alexandrian Greek Mathematician Euclid—was presented. Such assumptions may be said to derive from the most ancient formal science known to human beings: Geometry. In this opportunity, the latest advances of research in this specific field shall be presented by the author. These seem to verify that Chinese pentatonic music is not only related to the Five Movements but also that it finds a precise explanation in the Cycle of Fifths proposed by the Mathematics genius Pythagoras. This new method, called Therapeutic Acupunctural Resonance calls upon both the Greek Mathematic hypotheses as well as upon principles derived from Chinese Medicine coinciding with Morphic Resonance, a concept first introduced by Prof. Rupert Sheldrake in the early 1990s. The author shall also confront his work with several Chinese lines of research which deal with the propagated sensation (T'chi phenomenon) along meridians – such peculiar combination of both Oriental and Occidental knowledge – to which certain results he had can actually be assigned.

Biography

Adrian Angel Inchauspe was certified as laparoscopic surgeon in La Plata, Buenos Aires, Aachen, Tubingen and Strasbourg Universities. Currently, he serves as Editorial Member and Reviewer in many foreign renowned journals. He participated as Chairman in several International Drug Discovery Congresses and in the 2nd International Conference and Exhibition on Traditional Medicine-2014 in Beijing, where he proposed the foundation of the World Union of Traditional Medicines. Since 2005, he serves as teacher in the Argentina Acupuncture Society and published his “Systematized Integration of Acupunctural Therapeutic Knowledge” book in 2014. He has been searching about Yongquan resuscitation in the last 28 years.
