Infectious Diseases****&****International Conference on****Pediatric Care & Pediatric Infectious Diseases****August 24-26, 2016 Philadelphia, USA****Fever with rash****Ashok Kapse**

Mahavir Super Specialty Hospital, India

Child presenting with rash is common occurrence in pediatrics. Rash presenting with fever provides you material for microbiological evaluation, offers you unique opportunity to make clinical diagnosis and gives clinician vital leads towards severity markers. A case could be approached in different ways however rash based approach is the easiest way for clinical evaluation. Classification and evaluation of rash as erythematous, maculopapular, papulovesicular, petechial, blisterous and so on leads clinician to correct diagnosis and proper management. Correct typing of rash directs clinician towards a careful wait and watch approach in certain clinical situation while dictates him to act emergently in others. I intend to provide an easy clinico-pictorial approach for a case presenting with rash in day to day practice.

Biography

Ashok Kapse is a consulting Pediatrician practicing in the city of Surat in the Gujarat state of India, besides owning a private pediatric hospital he is also the Head of the Pediatric Department at a prestigious Mahavir Super Specialty Hospital. After completing graduation (MBBS) he did MD in Pediatrics. Initially he has worked as a Professor of Pediatrics at Medical College Surat, later he opted out for private practice however pursued academic interest.
