As we all know that brain is one of the mysterious complex subjects similar like the universe. The more we continue the feasibility study of neuroscience, the new mysterious things comes on and on which is unlimited, however constant research concerning neuroscience is my extreme passion. The present most challenging issue concerning neuroscience and neuro-immunology has been difficult to detect Alzheimer’s disease diagnosis. However, there are not yet any drug discovery relevant to AD nevertheless, after my groundbreaking discovery relevant to peripheral and central nervous system new truth theory. By correlating with that truthful theory based idea, I had designed a robotic neuro modulation technique (NMT) robotic device which role could be neuroplasticity or amyloid beta secretes removal in order to treat AD and some other neurodegenerative disease; whereas the NMT equation is HBBH = (TITT×T2s)ON.

Biography
Shyam Gurung is a neuroscience researcher not affiliated by medical school or university nevertheless; he is a natural neuro researcher based on traditional technique as well as collaborate with modern knowledge based support.
