Evaluation of handwriting differences between native language, a foreign language and an unknown language in terms of forensic sciences

Ekin Özcan, Nergis Canturk and Gürol Canturk
Ankara University, Turkey

Being a consciously done movement, writing starts with the imitation of the letters, it gradually continues with shaping of the personal esthetic emotions of the letter images appearing in the mind of the person writing it. Maturity of one’s handwriting in other saying shaping of the character depends on the learnt writing system, school, teacher, profession, time, setting and, personal and cultural competency of the writer. Frequency of the use of writing and professional life requiring writing affects the maturity level of writing. The purpose of this study is to observe the reflection of handwriting samples, which have been gotten from the texts that persons have written in their native language, an already-known foreign language and unknown language, on language dominance thorough evaluation of the forensic document parameters. 60 volunteer participants whose mother tongues use Latin alphabet, have written the same text given in their mother tongue, an already-know foreign language and unknown language using the standard white A4 size paper, same brand and model of 0.5mm black pen. Factors like inclination, sketching, continuity, pen pressure, pacing, tidiness, and punctuation and caption styles have been evaluated three times repeatedly by the same researcher with the repeated-measure method on average values SPSS 16.0 program through analyzing starting-ending gaps, tracking, capitalization, letter length line blanking and capital letter size with LED loop table lamp, functional magnifying glass and digital compass. Eventually, a meaningful difference have been found in sketching, pacing and punctuation parameters (respectively; p=0.001 and p=0.002). The level of language dominance used in the writing affects sketching, pacing and punctuation. These criteria have a great role for determining the frequency of use of writing in daily life in forensic document.

Biography

Ekin Özcan received her undergraduate degree in Physics at Ege University in İzmir, Turkey. She received her Master’s degree in Physical Examination and Criminalistics in Forensic Science Institute at Ankara University. Her area of interest includes forensic documents, on which she wrote her thesis. Currently, she is a PhD student at Ankara University. She has unpublished papers on forensic documents, health low, toxicology and nanotechnology in forensic sciences presented in various national and international congresses.
