

14TH ASIA PACIFIC PATHOLOGY CONGRESS

NOVEMBER 13-14, 2017 OSAKA, JAPAN

Update on prostatic adenocarcinoma

Turki Omar Al-Hussain

King Faisal Specialist Hospital and Research Center, KSA

Prostatic adenocarcinoma is the second most common malignancy worldwide. There have been new updates on pathology of prostatic adenocarcinoma. Recently, the International Society of Urological Pathology held a consensus conference in 2014 which was published in 2015. This conference predominantly deliberated with definition of various grading patterns of usual prostatic adenocarcinoma, grading of intraductal carcinoma and the new grade groups. Most of these updates were implemented and applied in the new 2016 WHO Classification of Tumors of the Prostate. The presentation will discuss the new update of prostatic adenocarcinoma with focus on grading system.

Biography

Turki Omar Al-Hussain has completed his MBBS degree in King Saud University, Riyadh, KSA. He has completed Pathology training at King Faisal Specialist Hospital in 2008 and then he joined the University of North Carolina at Chapel Hill, USA as Renal Pathology Fellow (2009-2010).
