Axiographie registration, what else?

Zenati
University of Blida, Algeria

L’odontologist deal everyday patients with temporomandibular joint disorders, their diagnosis is not always easy, therefore the use of axiograph registrations as functional exploration of TMJ in 3D is important in our therapeutic approach of the clinical case. Mechanic axiograph (SAM and quick axis) is used as complementary exams to diagnose the TMJ disorders. The graphic recording of condylar displacements can: clarify the type of RDC or DC/TMD; objectify the general direction of DC: pure anterior and/or transverse compartment; we can take our prognosis with consideration of the magnitude of the jump disc and; guide our therapeutic choice. Axiograph will become the indispensable device of tomorrow in all global occlusal rehabilitations prosthetico-conscients.

Biography

Zenati has completed her PhD from Algeria University and Post-doctoral studies from Algeria University School of Medicine. She has done many courses, conferences and communications. She is currently working as an Assistant Professor in Prosthodontics and Occlusodontics.
