Mio functional and postural rehabilitation – B E D (Body Equilibrium Device) technology

The Body Equilibrium System (B.E.D.) : The first and only appliance designed exclusively for rehabilitation therapists (physiotherapists, osteopaths, chiropractors, etc. ..) for postural rehabilitation, capable of overriding the stomatognathic system. It is the first device on the market able to counteract the negative effects of the stomatognathic system during rehabilitation.

Objectives/Learning Outcomes:

Participants should be able to:

- Perform a detailed bedside clinical postural and posturometric diagnosis.
- Find the relation between stomatognathic system and tonic postural system.
- How to avoid the negative effect in posture.
- Relation between diet, alimentation and intolerances related to postural diseases.
- Recognize the etiology of the postural alteration (main receivers of posture)
- Use of the B.E.D Body Equilibrium Device practically the only device for posture.

Intended audience includes:

- Physiotherapists
- Primary Physicians
- Physiotherapy intern/student
- All rehabilitation therapist

Biography
