Organ-specific rheumatoid arthritis is it a separate disease entity?

Adla B Hassan
Arabian Gulf University, Bahrain

Statement of the Problem: Rheumatoid arthritis is a systemic autoimmune disease. However, organ-specific rheumatoid arthritis (monoarthritis) has rarely been reported. It is not uncommon to see a rheumatoid arthritis patient who has only one single joint involvement (monoarthritis). Hence, there are no guidelines to demonstrate how to treat such patients. The purpose of this study is to describe the experience of encountering a rheumatoid arthritis patient with monoarthritis. Methodology & Theoretical Orientation: A 34 years old Bahraini female referred to my clinic on 2nd September 2014 from an orthopedic clinic, complaining of pain and swelling of her right knee, her symptoms started 6 months previously with only pain in her right knee and overtime she it developed swelling. No history of trauma, rest of history is insignificant except for mild fatigability and myalgia. Physical examination is significant only for the right knee which was swollen on the medial aspect, mildly tender, but not red or hot, quite the opposite; it was colder than the left knee. Findings: Extensive laboratory evaluation revealed positive rheumatoid factor, high anti-CCP (763.6 U/ml), high ESR (30), high CRP (17), high ANA (1:320), ENAs was negative, Plain X-ray was normal, patient refused to do MRI. Accordingly, the patient was diagnosed as seropositive rheumatoid arthritis (? organ-specific) and started on MTX (12.5mg Once/week), folic acid (5mg once/week) and plaquinil (400mg OD). After 9 months on therapy and up-to-date the patient was improved on all aspects, she became completely asymptomatic and all laboratory parameters went down, but still not normal. Conclusion & Significance: Early detection and treatment of the rheumatoid arthritis patient presents with monoarthritis could promise early remission.

Biography
Adla Bakri Hassan has been graduated from Gezira University in Sudan. She did her postgraduate studies and training at Karoliniska Institute and Karoliniska Hospital in Sweden, also at Hope Hospital in United Kingdom. She has experiences over 20 years in different hospitals and countries treating rheumatic disease patients; Sudan, Sweden, UK and Bahrain. She has over 10 years’ experience in teaching medical students. She is currently working as assistant professor at department of internal medicine at Arabian Gulf University (AGU) in Kingdom of Bahrain and as Consultant Rheumatologist at the University Medical Centre (UMC). She has over 20 publications in peer reviewed journal and also a reviewer peer journals.
