Physician burnout causes, consequences, and solutions

Describing the physician burnout: Discussing of contributors and consequences of physician burnout and distress. Few evidence-based methods are summarized in this study i.e. to prevent burnout and promote physician wellbeing. Physician well-being has come under increased scrutiny in recent years, there has been more discussion about Burnout and it leads to low job satisfaction, high stress and low quality of life. It affects all stages of physician training and practice and affects all specialties. The excessive workload, inefficient work environment, inadequate support, problems with work-life integration lead to worsening outcomes for both patients and physicians. For physicians loss of autonomy/flexibility/control, has led to loss of values and meaning in work. The consequences of physician burnout are medical errors, impaired professionalism, reduced patient satisfaction, increased staff turnover, depression and suicidal ideation, motor vehicle crashes and near-misses. The goal is to identify values, Debunk myth of delayed gratification. For physicians to work on hat matters to them most (integrate values) integrate personal and professional life, optimize meaning in work, nurture personal wellness activities, calibrate distress level. Make self-care (exercise, sleep, regular medical care); relationships (connect w/colleagues; personal); Religious/spiritual practice mindfulness; personal interests (hobbies) a priority. Individual-focused interventions meditation techniques stress management training, including MBSR communication skills training self-care workshops, exercise help reduces burnout symptoms.
