Mental illness is a symptom: the new treatments and methodology solution Nu-Rekall

Matthew D Dovel
USA

Nu-Rekall™ treatments focus on altering the hierarchical behavior creation inception points, and by doing so permanently eliminate unwanted learned behavioral reactions; depression, anxiety, P.T.S.D., phobias, coping mechanisms, and suicidal ideation.

What the world has lacked since the beginning of recorded history is 'Peace of Mind'.

I hypothesized, after observing an array of disciplines, that there was a unique sequential systematic naturally occurring phenomenon in the mind that changes hierarchical values. Hierarchical values have been determined to effect the decision making process according to Sigmund Freud; all decisions are made with the intention of avoiding pain and/or seeking a pleasure outcome. (Figure 1)

The human condition 2016

- 60,000,000 people report experiencing depression each year. (WHO)
- 3,000 plus individuals commit suicide each day. (WHO)
- Every human eventually experiences an event they'd like to forget.

Nu-Rekall™ is so successful because it addresses the three types of 'Memory Trauma' associated with most mental illnesses; Suppressed, Conscious, and Conditioned. Each type of 'Memory Trauma' must be addressed uniquely requiring three different treatments; EMR, 4 Phase, and P.M.C.H.O. (All Nu-Rekall™ treatments are noninvasive and non-medical, ranging from 5 to 20 minutes to facilitate).

The development, testing, and results of Nu-Rekall™ procedures were preformed over a 10 year period between January 2006-2016, treating thousands of individuals and experiencing the same results, at International Suicide Prevention a 501(c)(3) public charity nonprofit, treating the most severe of mental illness; suicidal ideation.

We have never in the history of mankind had a breakthrough in mental health treatments that claim 100% success rates like Nu-Rekall™ does because, we have never been able to successfully alter past memories without the use of invasive methods, medical procedures, and mind altering drugs that do severe damage to other brain functionality creating more problems than are attempting to cure.

Biography
Matthew D Dovel, President & Founder of International Suicide Prevention (non profit), Editorial Board Member of the International Journal of Emergency Mental Health and Scientist in Human Behavioral Modification has dedicated his life’s work to understanding and preventing suicide, education services to reduce suicide rates, providing post-suicide support for families and providing tested result based solutions for depression, anxiety, post-traumatic stress and suicidal ideation. In 2005, Dovel delivered Suicide Intervention training at the Cree Reservation in Oujé-Bougoumou, Canada and the 4 Phase technique reduced suicides from 1 non-fatal attempt per month and 1 fatal outcome per month to 1 non-fatal attempt per month and ZERO fatal outcomes in the subsequent six months.
