APPROACH FOR THE IMPROVEMENT OF THE WORK CONDITIONS IN THE OIL INDUSTRY

Bouhadja Abdelwaheb*

*Sonatrach, Algeria

What pushed us and encouraged to address this aspect, it's because there was a perceived need and a demand expressed felt with some issues for maintaining production, securing employment and preserving the health of the worker. To realize the investigation and ensure its durability of commitment on our side management is essential and that is the key to successful results. Its objective is improving working conditions after diagnosis & assessment. The first results from the viewpoint of the analysis job:

1. Working conditions: Physical conditions, Relations labour, Organisation training
2. Areas of intervention : Industrial Hygiene and Toxicology, Ergonomics, Environment, Occupational Medicine, Epidemiology and statistics, Industrial safety, Activities managerial, and operational support
3. Actors involved: Doctor work, Engineers: EP XP, MN, HSE, Ergonomist, Epidemiologist, Human Resources, Managers

The approach is based on:

1. Status: Analysis of working conditions at the workplace
2. Means: Study Duration 12 months, Held DP HRM and Multidisciplinary team
3. Methods: Analysis of working, conditions: Record company identification: INRS expanded and adapted to Sonatrach.
