OMICS Group welcomes submissions that are original and technically so as to serve both the developing world and developed countries in the best possible way. OMICS Journals are poised in excellence by publishing high quality research. OMICS Group follows an Editorial Manager® System peer review process and boasts of a strong and active editorial board. Editors and reviewers are experts in their field and provide anonymous, unbiased and detailed reviews of all submissions. The journal gives the options of multiple language translations for all the articles and all archived articles are available in HTML, XML, PDF and audio formats. Also, all the published articles are archived in repositories and indexing services like DOAJ, CAS, Google Scholar, Scientific Commons, Index Copernicus, EBSCO, HINARI and GALE.

Editor-in-Chief

Dr. Yoshihiro Ishikawa
Professor and Chair
Cardiovascular Research Institute
Yokohama City University
Japan
Tel: 011-81-45-787-2573
Biography

Dr. Yoshihiro Ishikawa has received his MD and PhD in Yokohama City University. Currently he is working as Chair of the Cardiovascular Research Institute of Yokohama City University School of Medicine. He also served as Professor of Cell Biology & Molecular Medicine and Medicine as well as Attending Physician at University of Medicine and Dentistry of New Jersey for many years. He has successfully completed his Administrative responsibilities as Dean at Yokohama. He is serving as an editorial member of several reputed journals like Pharmacological Reviews, Cardiovascular Research, or Journal of Physiological Sciences. He has authored more than 150 research articles/books. He is a member of numerous international societies such as American Heart Association, American College of Physicians, American Society of Biochemistry and Molecular Biology, Royal Society of Medicine or Japanese Society of Physiology. He has been honored as Established Investigator of American Heart Association, Fellow of American College of Physician, American College of Cardiology, American Heart Association.
Research Interests

Dr. Yoshihiro Ishikawa research interests are centered in drug development in cardiovascular and cancer therapy, cardiovascular physiology, sleep apnea and cardiovascular diseases.
Publications

Sleep apnea

- Sleep apnea is a potentially serious sleep disorder in which breathing repeatedly stops and starts. One may have sleep apnea if snore loudly and feels tired even after a full night sleep.

- Sleep apnea usually is a chronic (ongoing) condition that disrupts sleep. When breathing pauses or becomes shallow, one often move out of deep sleep and into light sleep. As a result, the quality of sleep become poor, which makes a person tired during the day. Sleep apnea is a leading cause of excessive daytime sleepiness.
SLEEP APNEA
SYMPTOMS

- Insomnia
- Snoring
- Impotence
- Dry mouth
- Throat
- Nocturia
- Morning
- Headache
- Fatigue
- Memory
- Loss
- Depression
- Moody
- Attention
- Deficit
Types of Sleep Apnea

- There are two main types of sleep apnea:
  - **Obstructive sleep apnea:** The more common form that occurs when throat muscles relax.
  - **Central sleep apnea:** Which occurs when brain doesn't send proper signals to the muscles that control breathing

Treatment & Management

- Treatments for central and complex sleep apnea usually include:
- Treating the underlying medical condition causing the apnea, such as a heart or neuromuscular disorder
- Using supplemental oxygen while sleeping
- Using breathing devices that will also manage obstructive sleep apnea
- Medications are only available to treat the sleepiness associated with sleep apnea, not the apnea itself, so they should only be used in conjunction with other proven sleep apnea treatments.
CPAP for sleep apnea

- Continuous Positive Airflow Pressure (CPAP) is the most common treatment for moderate to severe obstructive sleep apnea. In many cases, immediate symptom relief and a huge boost in mental and physical energy can be experienced. The CPAP device is a mask-like machine that provides a constant stream of air that keeps breathing passages open while sleep. Most CPAP devices are the size of a tissue box.
Dental devices for sleep apnea

- Most dental devices are acrylic and fit inside the mouth, much like an athletic mouth guard. Others fit around the head and chin to adjust the position of the lower jaw. Two common oral devices are the mandibular repositioning device and the tongue retaining device. These devices open airway by bringing lower jaw or tongue forward during sleep.
Surgery as treatment for sleep apnea

- Surgery can increase the size of the airway, thus reducing the episodes of sleep apnea.
- The surgeon may remove tonsils, adenoids, or excess tissue at the back of the throat or inside the nose. Or the surgeon may reconstruct the jaw to enlarge the upper airway. Surgery carries risks of complications and infections, and in some rare cases, symptoms can become worse after surgery.
