Glycomics is the systematic study of all glycan structures of a given cell type or organism, and is a subset of glycobiology. Lipidomics is the large-scale study of pathways and networks of cellular lipids in biological systems. The Journal provides an open access platform to publish latest advancements in the field of glycomics and lipidomics.

The Journal of Glycomics & Lipidomics under open access category aims to advance our understanding and recognition of role of glycans and lipids and including genetic, physiological and pathological aspects. The Journal of Glycomics and Lipidomics is an international, peer-reviewed journal publishing an overview of human research on glycans and lipids on the cellular membranes and recent research field that has been driven by rapid advances in technologies such as mass spectrometry (MS), nuclear magnetic resonance (NMR) spectroscopy, fluorescence spectroscopy.

Journal of Glycomics & Lipidomics explicates the complicated aspects involves the identification and quantification of the thousands of cellular molecules and their interaction with other lipids, glycans and other metabolites. Investigations in lipidomics examine the structures, functions, interactions, and dynamics of cellular molecules and the changes that occur during perturbation of the system. The Journal is promptly available, and is freely accessible globally through internet to share the innovations of the researchers for scholarly advancement in this field.

Journal of Glycomics & Lipidomics - Open Access uses online manuscript submission, review and tracking systems for quality and quick review processing. Submit your manuscript at http://www.editorialmanager.com/omicsgroup/
