Speech therapy is one of the major concerns that involves continuous assessment and treatment of communication by the Speech Language Therapists (SLPs). In this evolving world, different associated delays and disorders among people of all the ages in speech therapy are being addressed and new methods are being tried out to provide an effective communication. Through research and development of various strategies, the Journal of Speech Pathology and Therapy (JSPT) serves as a platform to showcase the recent studies made in this particular arena. It also shares information on early diagnosis, detection techniques and altered prophylaxis, if any. It creates a network among the authors, readers, researchers, therapists, medical practitioners etc. from all over the world and engages them with the latest cumulative strategies coming up, to improve the speech therapy.

The Journal has successfully completed 4 years by 2019 and is being monitored and modified on daily basis to reach out to its maximum in collecting and furnishing the information allied with the therapy. Till date, many excellent articles have been published and the print issues have been released and dispatched, within the time. In an article published in our journal authors have discussed about the Children Who Stutters (CWS) disorder and its associative co-occurring characteristics and impact on the children. It aimed to investigate reliability and describe reference data of the KiddyCAT-G, an authorized German adaptation of the Communication Attitude Test for preschool and kindergarten children who stutter.

The KiddyCAT-G had moderate to high values of internal consistency for both groups, as well as high test-retest-reliability. Reports and statistics of child abuse have been shown and have elaborated on mandated reporting of suspected child maltreatment as an essential step in promoting child safety. Understanding the factors that predict an individual's likelihood of reporting abuse can potentially abate maltreatment occurrence and child mortality. To create awareness among children and adults of speech deformity, to give them a sense of confidence is the target that needs to be understood and felt.

The Journal has taken to social media like Facebook, LinkedIn and Twitter to post on the recent findings and the outcomes of the advanced studies. It has wide advertising options ranging from banners, newsletters, manuscripts, reviews etc. and can be customized accordingly. The Journal has triggered a curiosity among its viewers and is captivating them to visit and enhance their research studies. It proofreads and publishes material with high quality and efficiency, maintaining the ethics. We are planning to change our journal from tri-annual to bimonthly journal depending upon the flow of articles. We welcome you to keep supporting our efforts to publish manuscripts of highest quality which could only be done along with your assist.
