CLINICAL PROFILE AND PROGNOSTIC FACTORS OF GUILLAIN BARRE SYNDROME IN A TERTIARY CARE CENTRE

Gaganpreet S Taneja

SRI RAMACHANDRA INSTITUTE OF HIGHER EDUCATION AND RESEARCH, CHENNAI, INDIA

Guillain Barre Syndrome (GBS) is an acute, inflammatory polyradiculoneuropathy, with varied Clinico-Electrophysiological features, some of which are associated with poor functional outcome.

AIMS: This study is undertaken to evaluate the clinical, laboratory and electrophysiological features of patients with GBS admitted at our tertiary care hospital Chennai. It also aims to identify the parameters that can be used for early detection of patients with unfavourable outcomes.

Biography
