Editorial

Bioterrorism is the use of biological warfare agents which harms mankind. Biodefense involves medical measures to protect against biological agents. Journal of Bioterrorism & Biodefense under Open Access category aims to advance our understanding of the harmful effects of the bioterrorism and approaches for biodefense of potentially harmful agents. Journal of Bioterrorism & Biodefense is a scientific journal which provides an opportunity to share the information among the medical scientists and researchers. Bioterrorism & Biodefense is a academic journal and aims to publish most complete and reliable source of information on the discoveries and current developments in the mode of original articles, review articles, case reports, short communications, etc. in all areas of the field and making them freely available through

online without any restrictions or any other subscriptions to researchers worldwide. Bio surveillance is a process of gathering, integrating, interpreting, and communicating essential information that might relate to disease activity and threats to human, animal, or plant health. For the public health professional, bio surveillance activities range from standard epidemiological practices to advanced technological systems, utilizing complex algorithms. It is important for local health officials to have a heightened awareness of bio surveillance programs at the federal, state, and local levels. Bio-agents may be amenable to “weaponization” to render them easier to deploy or disseminate. Genetic modification may enhance their incapacitating or lethal properties, or render them impervious to conventional treatments or preventives.
