

Editor's Note on Psychological Effects of COVID-19 and its overview-letter to Readers

Kuldip Sidhu*

Associate Professor, Centre for Healthy Brain Ageing, University of New South Wales, Sydney, Australia

Extreme intense respiratory disorder crown infection 2 (SARS-CoV-2) has met characterization of a pandemic and keeps on spreading universally (WHO). The World Health Organization (WHO) latest affirmed cases are at more than 2 million, 157, 000 passings, and more than 213 nations with recognized cases. Outside of the patients affected by COVID-19, the world's biopsychosocial make up is developing and affecting mankind in an unexpected way. Morals encompassing the effect of COVID-19 from a human services point of view have immediately been created on a universal and national levels (WHO, Ethics), which sway how we triage and designate assets. A portion of these moral proposals are proof of the force of the pandemic for human services suppliers.

There is a developing writing on the ramifications of COVID-19 on the medicinal services workforce. Lai and partners (2020) found that in China, bleeding edge medicinal services laborers are bound to encounter fundamentally more elevated levels of gloom, nervousness, a sleeping disorder, and pain contrasted with other social insurance laborers. Tan and associates discovered comparative outcomes in an examination in Singapore with higher paces of gloom, nervousness, post-horrible pressure issue (PTSD), and worry in doctors and medical caretakers contrasted with other unified wellbeing workers.

Journal is resolved to distribute exceptional, high caliber and unique exploration papers close by important and adroit surveys and short interchanges, wherein the last tries to be lively, captivating and effectively open, all the while compulsory and testing. On a more splendid note the journal discharges five issues for every volume and each issue

comprises of five fluctuated papers adding hypothetical and methodological exploration papers, empowering basic audit papers and taught short correspondences. A wide range of papers are exposed to single-blinded companion survey process. IJEMHHR was built up with a dream of supporting and advancing examination in Mental Health from over the world. We are hoping to grow our board of analysts and publication board from over the different sub specialities inside the exploration region.

Google Analytics has uncovered an astonishing insights in regards to the notoriety of this diary. All through Feb 2019-Nov 2019 there were 17, 860 site hits.
