

Hyperbaric oxygen therapy and aesthetic laser in the management of necrotizing fasciites in diabetics.

Kadiri Chaimae,

University Hospital Cheikh Zaid , 10 000 ,Morocoo

ABSTRACT:

Presentation of a case:

We describe the case of a young patient of 50 years, followed in our consultation for hypothyroidism on right isthmus lobectomy well balanced under L Thyroxine and presenting a type 2 diabetes in fairly good balance under diabetic diet and metformin. In addition, the patient presented with necrotizing fasciitis following a surgical treatment for hernia of the white line. The patient benefited from 30 hyperbaric oxygen therapy sessions with local care. The evolution was favorable with disappearance of necrotic and superinfected tissue and regeneration of the abdominal wall. She also performed laser sessions for disappearance of scars.

Biography:

Kadiri Chaimae has completed his PhD at the age of 24 years from Faculty of medicine of Rabat and She is doing his postdoctoral studies in university hospital cheikh zaid in Rabat , Morocco .

She is Resident doctor in endocrinology and metabolic disease department of university hospital cheikh zaid.
