

16th International Expo on Recycling and Waste Management.

Jae Kwang Park

Professor, Department of Civil and Environmental Engineering, University of Wisconsin-Madison, USA, E-mail: jkpark@wisc.edu

After the successful completion of the Recycling Expo 2020 conference series, we are pleased to welcome you to the "16th International Expo on Recycling and Waste Management." The congress is scheduled to take place on August 19-20, 2020 in the beautiful city of Tokyo, Japan. This 2020 Recycling Conference will give you exemplary experience and great insights in the field of research.

Global waste volume generation is expected to increase from 23,655.5 million tons in 2016 to 32,774.1 million tons in 2021. Waste recycling markets consist of Municipal Solid Waste (MSW): Commercial and residential waste in solid or semi-solid form, excluding hazardous waste and waste electrical and electronic equipment (WEEE).

Recycling Expo 2020 brings together resources and expertise to bridge recycling & waste management techniques to disclose significant global recycling techniques. It provides a great platform to cover recent breakthroughs in waste management techniques which includes E-waste, solid waste, wastewater, construction waste and paper, Industrial, food, agriculture waste recycling; Metal, plastic recycling and thermal and chemical waste recovery.

Global waste volume generation is expected to increase from 23,655.5 million tons in 2016 to 32,774.1 million tons in 2021. Waste recycling markets consist of Municipal Solid Waste (MSW): Commercial and residential waste in solid or semi-solid form, excluding hazardous waste and waste electrical and electronic equipment (WEEE).

E-Waste Recycler: The report esteemed the market at US\$ 10.2 billion in 2013 and predicts an expansion of 25% throughout the following six years, taking it to US\$ 48 billion by 2020. As far as volume, the market was 54 million tons in 2012 and it is evaluated will be 147 million tons by 2020. PCs framed the biggest section of electronic items being reused in 2012 and are relied upon to keep up their strength later on, because of the speed of microchip improvements and a diminishing in PCs' normal life cycle.

The global e-scrap market will reach a value of US\$ 48 billion (Approx. Euro 35 billion) by 2020, according to a new report published by US-based Transparency Market Research.

Solid Waste Management: Solid waste administration sorts comprise of daily paper, natural material, paper and paperboard, plastics, elastic, cowhide, materials and wood. Natural material incorporates reject from kitchen, vegetables, blooms, leaves and organic products; they are the real giver in general metropolitan strong waste. Paper transfer was the second driving fragment inferable from expanding industrialization and development in the instruction area. Reusing is a compelling and effective strong waste administrations advertise procedure, expanding natural concerns combined with absence of asset accessibility is probably going to push interest for this practice. Natural material was the main supporter in this fragment took after by daily paper or mechanical paper. The strong waste administration industry is described by stringent government directions relating to MSW administration and productive execution including reuse, reusing, diminish and recuperation strategies. As per the American Environmental Protection Agency (EPA), the U.S. produced more than 265 million tons of waste, with a reusing rate of around 33%, the organization gave account. Fast urbanization and expanding utilization level of assets, for example, paper, plastic, edibles and materials were relied upon to twofold the city strong waste (MSW) over the figure time frame.

Recycling Expo 2020 brings together resources and expertise to bridge recycling & waste management techniques to disclose significant global recycling techniques. It provides a great platform to cover recent breakthroughs in waste management techniques which includes E-waste, solid waste, wastewater, construction waste and paper, Industrial, food, agriculture waste recycling; Metal, plastic recycling and thermal and chemical waste recovery. The aggregate sum of paper gathered and reused was named as "steady" in 2014 at just shy of 57 million tons. Reusing was 17 million tons higher (+43%) a year ago when contrasted with 2012, the ERPC

Journal of Earth Science & Climatic Change

watches. In general, a net volume of 9.8 million tons (or 15% of the 56 million tons) was foreign made from Europe for reusing by third nations outside the EU-27 or more Norway and Switzerland.

Government of each and every country is allotting grants to recycling the waste and implementing projects to reuse the material. For an example England Government is funding grants for seven recycling projects and it was published on Aug 2015. The main theme is to recover at least 75% waste from the landfill by 2021.

In 2018, the global market for Recycling Expo was 67 million US\$ and is expected to reach 86 million US\$ by the end of 2025, with a CAGR of 10 per cent between 2019 and 2025.

In recent years, the market for Recycling expo 2020 has seen significant growth directly on the back of the increasing number of procedures for Recycling and waste management

Exports of plastic have been growing

Tonnes sent for reprocessing
