32nd [European Pediatrics Congress](#) will be held during July 22-23, 2020 in Florence, Italy, working with the theme: "New Insights for Preventive Care and Better Health of a Child."

[Pediatric care](#) in Italy developed during the last 40 years based on the increased awareness of the importance of meeting the psychosocial and developmental needs of children and the role of families in promoting the health and well-being of their children. As of 2015, the Italian medical workforce in pediatrics is approximately 13,350 pediatricians, including approximately two-thirds PCPs and one-third pediatricians currently working in the PHUs of private and public hospitals and an additional 330 university pediatricians currently working in PHU of academic institutions or research centres. Projections made by the Italian Society of Pediatrics indicate that, based on the average number of 280 positions for postgraduate training education in pediatrics normally issued yearly by the Ministry of Education, the tipping point will be reached in 2023 thereafter, Italy may face a significant deficit of pediatricians. The three main Italian societies of pediatrics, members of the European Paediatric Association, the Union of National European Paediatric Societies and Associations, do not favor solutions that will increase the role of GPs in child health care, because the pediatric training of GPs is highly insufficient to ensure high quality of services for children. Most recent policies adopted by the Ministry of Health show that pediatric health care system is still considered a factor of strength for the Italian Public Health System and governments.

Number of specialists in pediatrics covering public health care services in Italy

Global Pediatrics Market Research:

The International pediatric market consists of healthcare services which divide into various areas such as medical services, devices, equipment, hospital supplies and pharmaceuticals.

As young children are prone to illness and infections easily, the pediatric market is flourishing with a rise in the market share. This is usually due to the changes in lifestyle and dietary habits.

According to various reports, Pediatric healthcare market was valued at US \$88, 00 Million in 2017 with a CAGR of 4.5% and is expected to rise to 5.5% in the upcoming years by 2026. The rise in disorders among children causes the demand of pediatric drugs to rise every year. The antibiotics segment is expected to increase and dominate the market from 2018 to 2026.

Every change in diet and eating habits results in the rise of diseases like obesity, heart attack and blood pressure. Due to this, obese children are likely to attract more diseases. According to the World Health Organization, the number of obese children is around 20 million worldwide with almost half of the obese children in Asia.

Pediatric Vaccines Market Analysis:

The pediatric vaccine market size was around 22 billion in 2016 with increased government and private funding. It is likely to have a positive impact on the market growth with chronic diseases being one of the major factors. According to the WHO around 5 billion children face illness due to not having proper pediatric treatment and half billion children die globally.

Europe controls the second spot within the world medicine healthcare market in 2018, thanks to the increasing demand for chronic disease treatment, rising health care infrastructure, and growing enterprises of medical hospitals and clinics. Germany, the UK, and

France square measure major countries within the European medicine health care market. The United Kingdom is about to be growing quickly over the forecast timeframe. Germany dominated the ECU market with a serious revenue share in 2018, thanks to the increasing use of advanced medical treatment and varied technological advancements.

The Asia Pacific medicine health care market can show the best CAGR over the forecast period, attributable to the varied improvement within the health care infrastructure, rising demand for chronic disease treatment, technological developments in medical devices, and also the increasing child population tormented by diseases and disorders. China and Japan square measure dominant country-level markets within the region, whereas Asian nation is calculable to grow quickly within the future years.
