

## Management of pain with water-wash processed Bhanga (*Cannabis sativa L.*) in cancer patients with deprived quality of life: An open-labelled single arm clinical trial

**Swagata Dilip Tavhare**

GJ Patel Institute of Ayurvedic Studies and Research, India.

Pain is a common and persistent symptom of cancer and sometimes induced by its treatment. It is a multidimensional and complex experience having physical, social, spiritual and psychological aspects. In India, approximately 60%–80% of currently diagnosed cancer patients are identified when the disease is in its advanced stage and 70%–80% of these patients experience pain. Use of *Bhanga (Cannabis)* for the management of pain has been well documented in Ayurveda classics. To assess the analgesic potential of water-wash processed *Cannabis sativa L.* leaves powder in cancer patients with deprived quality of life (QOL). An open-labelled single arm clinical trial performed.

Dr Swagata Tavhare, has completed her PhD in Ayurveda at the age of 29 years from Gujarat Ayurved University, Jamnagar. She is assistant professor, at GJ Patel institute of Ayurvedic studies & research, Anand. She has published more than 10 papers in reputed journals and has been serving in the field of academic, research and clinical practise of Ayurveda.
