Scope and Importance of Endocrinology and Metabolic Disorders:

The global Endocrinology Drugs market is valued at xx million US\$ in 2019 and will reach million US\$ by the end of 2023, growing at a CAGR of 6.48% during 2019-2023. The objectives of this study are to define, segment, and project the size of the Endocrinology Drugs market based on company, product type, end-user, and key regions like Novo Nordisk, Pfizer.

The Asia-Pacific self-monitoring blood glucose devices market is expected to expand at a CAGR of 6.34% during the 2019-2024 period, owing to technological breakthroughs, rising obesity, and the increasing prevalence of diabetes. 277 million baht or 8 million dollars have been invested by Novo Nordisk in clinical research in Thailand. Extensive market research carried out by the analysts has shown that the global endocrinology market will grow steadily at a CAGR of more than 6% and global metabolic disorders therapeutics market will grow steadily and will post a moderate CAGR of close to 5% over the forecast period.

An increase in the prevalence of hormone-related disorders such as diabetes, hypogonadism, hypothyroidism, and hyperthyroidism is one of the key factors driving the growth of this market over the forecast period. The prevalence of diabetes is on the rise owing to obesity, an unhealthy diet, and lack of physical activity among individuals. According to many research studies, nearly 415 million individuals were affected by diabetes in 2015 and this number is likely to reach 642 million by 2040. Moreover, with the growing prevalence of hypogonadism in men due to diabetes and heart or renal diseases, it is estimated that the intake of medications will increase. This increase in the intake of medications will propel the prospects for growth in this market during the next four years.

In the United States, the most well-known endocrine illness is diabetes mellitus. Diabetes mellitus is a gathering of sicknesses arranged by a lack of insulin creation or the capacity of the body to utilize it. According to the American Diabetes Association, in 2010, 25.8 million children and adults in the United States (8.3% of the population) have diabetes.
