

## Market Analysis on Euro Surgery 2021

After the successful completion of the Surgery conference series, we are pleased to welcome you to the “15th International Conference on Surgery and Anesthesia.” The congress is scheduled to take place on October 21 - 22, 2021 in the beautiful city of Madrid, Spain. This 2021 Surgery Conference will give you exemplary experience and great insights in the field of research.

According to this research report, the global market for Surgery is projected to show a robust growth of 6.5 per cent in the CAGR during 2019-2024.

Immunosuppressive drugs hold hanging patient profile dynamics during organ transplantation has stimulated the growth of transplantation diagnostics in the market. Furthermore, the hanging dynamics of patient profiling during Surgery have stimulated the growth of transplantation diagnostics on the market. Transplant diagnostics products are expected to see significant growth on the back of an increasing number of organ donors.

Organs that have been successfully transplanted include the heart, kidneys, brain, liver, lungs, pancreas, intestines, and thymus. Approximately 2,200 lung transplants have been performed worldwide every year since 2000 and beyond. Between 2000 and 2006, the median survival period for patients with lung Surgery was 5-and-a-half years, which means that half of the patients survived for a shorter period of time and half survived for a longer period of time.

In China, kidney transplantation is about \$70,000, liver

\$160,000, and heart \$120,000. Although these prices are still unattainable for the poor, compared to the fees of the United States, where a kidney transplant may be required.

Kidney transplantation is the most commonly performed Surgery in the world. It has gained widespread popularity by improving the outcome of patients with end-stage renal disease. With advances in kidney transplantation methods and improved transplant success, kidney transplantation is now widely considered to be the best way to treat chronic kidney disease for many people.

In 2018, the global market for organ transplantation was 67 million US\$ and is expected to reach 86 million US\$ by the end of 2025, with a CAGR of 10 per cent between 2019 and 2025.

In recent years, the market for Surgery has seen significant growth directly on the back of the increasing number of procedures for organ transplantation. In addition, an increase in the rate of organ donation and an increase in the prevalence of chronic diseases is expected.
