ABSTRACT

The objective of this study is to evaluate and compare the Anthelmintic activity of methanolic extract of Picrorrhiza kurroa Royle ex. Benth (Scrophulariaceae). Picrorrhiza kurroa is a small perennial herb growing in the hilly parts of the North-western Himalayan region in India and Nepal. Earth worms were used for Anthelmintic activity. Piperazine citrate was used as standard drug. Time required for paralysis and death of the earth worms were noted for each sample.

Keywords: Pheretima posthuma, Piperazine citrate, Picrorrhiza kurroa, Anthelmintic activity.

INTRODUCTION

Picrorrhiza kurroa Royle ex. Benth. Belonging to the family Scrophulariaceae is a small perennial herb that is widely distributed in the North-west India on the slopes of Himalayas between 3000 and 5000 meters¹.². Picrorrhiza kurroa is valued as hepatoprotective, Anti-periodic, Cholagogue, Stomachic, Anti-amoebic, Anti-oxidant, Anthelmintic, Anti-inflammatory, Cardiotonic, Laxative, Carminative, Expectorant etc³-⁴. On account of its use as Anthelmintic as well as bitter, this study was undertaken to evaluate the Anthelmintic potential. Anthelmintics are the drugs that expel parasitic worms from the body either by paralyzing of killing them⁵. Helminth infections are now being recognized as the cause of many acute as well as chronic ill healths among the various human beings as well as cattle's. More than half of the population of the world suffers from infection of one or the other and majority of cattle population suffer from worm infections⁶. The objective of the present study is to evaluate Anthelmintic activity of methanolic extract of rhizomes of Picrorrhiza kurroa plant.

MATERIALS AND METHODS

Authentication of the plant material:
The plant specimen was collected from S.V University; Tirupati and has been identified as Picrorrhiza kurroa Royle ex. Benth. Belonging to the family Scrophulariaceae, Voucher No: SDIP, Ref No: 002 dated 26/10/2012 and authenticated by Dr. K. Madhavachetty, Botanist, Tirupati. The rhizomes of the plant were dried in vacuum oven at 40°C. C.

Preparation of the plant extract:
Rhizomes of Picrorrhiza kurroa plant are coarsely powdered and are successively extracted by continuous hot percolation.
method using Soxhlet apparatus employing chloroform and methanol. Methanolic extraction yielded sufficiently good quantity of the product. From the dried methanolic extract, accurately 20mg/ml, 40mg/ml, 60mg/ml, 80mg/ml, 100mg/ml, 120mg/ml solutions were prepared using distilled water.

**Standard used for the activity:**

Piperazine citrate is used as the standard to compare the test results. The standard drug was prepared in the concentrations of 10mg/ml using distilled water as solvent.

**Animals:**

Adult earth worms (Pheretima posthuma) of about 6-8cms long were chosen for Anthelmintic activity.

**RESULTS AND DISCUSSION**

Results of preliminary phytochemical screening showed the presence of carbohydrates, glycosides, saponins, steroids like Cucurbitacins, Phenolic, Iridoid glycosides are some of the principle constituents responsible for various pharmacological activities. Iridoid glycosides like kutkin, Picroliv, Picrisides I, II, III & IV, Kutkosides are the chemical moieties that may be responsible for Anthelmintic activity. The Table no: 01 reveals that the methanolic extract obtained from the rhizomes of Picrorrhiza kurroa are active against earth worm. Methanolic extract of Picrorrhiza kurroa rhizomes showed good Anthelmintic activity in a dose dependent manner. The Anatomy and Physiology of Pheretima posthuma is similar to that Helminthes. Therefore earth worms were used in this study. It has been demonstrated that all Anthelmintics are toxic to earth worms, and a substance toxic to earth worm is worthy for investigation as an Anthelmintic. Further studies are needed to establish the mode of activity. The Anthelmintic activity can be ascertained by testing the drug on other species of helminthes which is our future part of research work.

**ACKNOWLEDGEMENTS**

Authors are thankful to manager of the vermin culture plant for providing us the earth worms. Authors also express
