Introduction

The personality and characteristic based on the archetypes, studied by Carl Jung, has direct relation to health as a whole. The nuances of the behavioural state of imbalance are demonstrated according to the characteristic archetypal of each individual, unleashing incessant internal conflicts starting between reason and emotion [1,2].

The hypothalamus, also known by quantum physics as "Brain pharmacy", passes to liberate toxic neuropeptides in the bloodstream

result of twisted thoughts and feelings, which culminate in the manifestation of the genomes of the disease, until the moment asleep. Therefore, the organism loses its natural condition to block archetypal information, sign of the loss of tuning of one or more minerals from the intermindal barrier, resulting in energy syndromes (Figures 1 and 2).
