**Abstract**

Here we provide the step by step procedure to end that the Generalized Lie Theory converges to one solution, that is the Universe. We consider the Hyperbola; Rotation Matrix, the Cross and Dot Products; Euler's formula, Communicator, and Astrotheology Mathematics. They all converge to one final solution.

**Keywords:** Unit hyperbola; Orthogonal rotation matrix; Cross product; Euler's formula; Communication; Clairnaut; Golden mean parabola; Ln function; Resistance to mass

**Introduction**

In this brief paper, e being by considering the various components of Generalized Theory. We see they all converge upon one solution, namely, the Astrotheology Model of the Universe. This paper consort is properly understood until the reader is familiar with the AT Math.

**Unit hyperbola**

$$X^2 - Y^2 = 1$$

$$\cos^2(\pi/4) - \sin^2(\pi/4) = 1$$

**Orthogonal rotation matrix**

$$A = \begin{vmatrix} \cos \theta & \sin \theta \\ -\sin \theta & \cos \theta \end{vmatrix}$$

$|A| = 1$  when  $\theta = 60^\circ$  Superforce =  $\sin 60^\circ$  [1]

Cross product = dot product  $\rightarrow$  Space s [2]

$$s = |E|t|\sin \theta$$

$$E = 1/t$$

$$s = (1)(1)\sin(\pi/4)$$

$$= 1/\sqrt{2} = \sin 45^\circ = \cos 45^\circ \rightarrow \text{Dot Product} = \text{Cross Product}$$

$$\theta = \pi/4 = 45^\circ$$

**Euler's formula**

$$\cos^2(45^\circ) + i \sin(45^\circ) = e^{it}$$

$i = -0.618$  Let  $t=2$  communicator  $t=2 = \text{Vector}$  [3]

$$E = e^{(0.618)(2)} = 1/0.809 = 1/c^4 = 0.12345679$$

$$(1/\sqrt{2})^2 + (-0.618)(1/\sqrt{2})^2 = 1/2.9997 = 1/c$$

$$1/c = (1/c^4)^{0.250}$$

$$T = 0.250 = 1/t \Rightarrow t = 0.4 = 1 \text{ rad } t = 1$$

**Clairnaut differential equation [4]**

$$y' = y'' = s = v = a = (-\sin \theta) = \cos \theta \text{ and } d^2E/dt^2 = G$$
 [1]
$$d^2E/dt^2 - E = 0$$

$$\iint d^2E/dt^2 = \iint E$$

$$\iint G = E^3/3$$

$$G^3/3 = E$$

$$6.67^3/3$$

$$= 9.89$$

$$= E = 1/t$$

$$t = 1/0.989 = 1.01 \sim 1$$

**Golden mean**

$$t^2 - t - 1 = E$$

$$(1.01)^2 - 1.01 - 1 = 0.9899 = 1/1.01 = dE/dt$$

**LN function**

$dE/dt = 1$  when  $t=1$  and  $E=0 \rightarrow$  Conservation of Energy (Figure 1).

$$E = e^{-t}$$

$$= e^{-1}$$

$$= 1/e$$

Figure 1: The Ln and exponential functions.

cf. Dampened Cosine

$$Y=e^{-t} \cos (2\pi t)$$

Let  $Y=E$  and  $t=1$

$$E=Y=e^{-1} \cos (2\pi)$$

$$E=1/e$$

$$\text{And } E=e^{-\pi}=0.04321$$

$$1-E=1-0.0=1=E$$

$$1-1/t=1/t$$

$$1=2/t$$

$$t=2$$

### Golden mean

$$(2)^2-2-1=1=E \quad E=1 \text{ and } t=2$$

$$E=e^{-t} \cdot R_m=0.43214 \cdot \text{cuz}=0.0084=\epsilon_0 \rightarrow \text{Permittivity of space}$$

$$\text{Ln}(0.884)=0.123=1/c^4=e^{it} \text{ where } i=0.618 \text{ and } t=2$$

### Resistance to mass formation

$$R_m=(\pi-e)=\text{cuz}=(t-E)$$

$$(t-E)=Y=E$$

$$t=2E$$

$$E=1=t/2 \rightarrow t=2 \text{ vector}$$

### Golden mean equation

$$1+t=t$$

(Note: For the Dampened Cosine,  $Y=e^{-t} \cos (2\pi t)$ ,  $E=1/t=1$  when  $t=1$ ,  $Y=0.202$  at the beginning of the dampening or  $t=0$ . Another way, when the Ln function crosses the x axis at  $t=1$ , the dampened cosine begins, or  $t=0$ ).

### Derivative

$$0+dt/dt=dt/dt$$

$$0+1=1 \text{ True!}$$

$$1+t=t$$

$$(t+1)/t=t$$

$$t^2=t+1$$

$$t^2-t-1=0 \rightarrow \text{Golden Mean Equation.}$$

### Conclusion

The solution of Generalized Lie Theory converges to the Specialize Lie Theory, or Astrothoelogy, Cusack's Universe.

### OMICS International: Open Access Publication Benefits & Features

#### Unique features:

- Increased global visibility of articles through worldwide distribution and indexing
- Showcasing recent research output in a timely and updated manner
- Special issues on the current trends of scientific research

#### Special features:

- 700+ Open Access Journals
- 50,000+ editorial team
- Rapid review process
- Quality and quick editorial, review and publication processing
- Indexing at major indexing services
- Sharing Option: Social Networking Enabled
- Authors, Reviewers and Editors rewarded with online Scientific Credits
- Better discount for your subsequent articles
