

The Speed of Light and Astrotheology

Paul TE Cusack*

Independent Researcher, BSc E, DULE, 1641 Sandy Point Rd, Saint John, NB, Canada E2K 5E8, Canada

Abstract

In this paper we consider some spot calculations on the variables from Astrotheology Physics. Energy, time, space, mass, and distance are used to determine the speed of light accurately. The speed of light is not dependent upon the speed of the observer; rather, it is a constant that is pinned down by the cross product of Energy and time resulting in space and consequent speed of light. Einstein had a degree of freedom that doesn't exist in our universe.

Keywords: Energy; Time; Space; Mass; Distance; Speed of light

Introduction

Here we provide some interesting calculations leading to the calculation of the speed of light and why it is exactly 3.0000. We consider Energy, time, space, distance, and the speed of light. We begin with energy calculations already well know from Astrotheology Mathematics [1].

Energy Sink

$$E=0.866$$

$$E=Mc^2$$

$$0.866=M*9$$

$$M=0.0964$$

$$0.964/79.9182/6.023=0.202=Y \text{ (BeCl}_2=79.182 \text{ gm/mole)}$$

$$E=Mc^2 \cdot 0.202=M*9$$

$$M=4.486 \text{ E}=0.858$$

Energy Density

$$\text{Vol of Ellipsoid}=4/3 \text{ Pi abc}$$

$$=4/3\text{Pi} (66)(24)(3)=19905$$

$$E_{\text{hat}}=.8515 * \text{Pi}$$

$$=0.001344 \sim s$$

$$Y=e^{-t} * \cos(2\text{Pi} t)=0.1281*0.7441=0.0955$$

$$s=0.5044$$

$$\sim 1/2$$

Gravity

$$d^2E/dt^2=G$$

$$dE \cdot dt * d/dt=G$$

$$\text{STRETCHED ENERGY} * \text{STRETCHED TIME}=G$$

$$\lim_{\text{Pi} \rightarrow \infty} \text{Pi} \Rightarrow \text{Infinity} + \lim_{x \rightarrow 0} x \Rightarrow 0 = \text{Integral } x$$

$$\text{Pi } x + e^x = x^2/2$$

$$x^2 - 2\text{Pi} - e^x = 0$$

$$\text{QUADRATIC}$$

$$x = -6.67 = G$$

$$\text{or } x=0.4216=cuz$$

Now square all terms:

$$\text{Pi}^2 x^2 - x^4/4 = (e^x)^2$$

$$x^2(x^2 - 4\text{Pi} - 2.718^2) = 0$$

$$x=0$$

$$x=2.667=F/10$$

or

$$x=1.3356=s*10$$

$$(1+t)^{11}=1$$

$$(1+1/81)^{11} =$$

$$\text{Ln}(1+0.012345679)=1.227$$

$$1/1.227=81.5 \sim 81$$

$$x=\text{Ln } x$$

$$1 \times 10^{11} / [60 * 60 * 365.25] * c = 253 \text{ LY}$$

Period:

$$T=253 \text{ LY}$$

$$(E)=e^{-t}$$

$$E * dM/dt = \text{Temp} [=] \text{ J Kg/sec}$$

$$2 \sqrt{3} = \text{Temp}$$

$$\text{Temp}=3.46$$

$$3.46 * 4.486 = 15.54$$

$$E=0.8446$$

$$\text{If } E=0.8415$$

$1/0.8415=1.6551$
 $Y_c=0.604$
 $E=Y_c$
 So from above,
 $(t+1)^{11}=s * e^{-t} \cos(2\pi * t)$
 And,
 $d^2t/dt^2-E=Ln t$
 $2(e^{-1/3}+1)=e^{-t} \cos(2\pi * t)$
 $2(e^{-0.333} +1)=e^{-t}$
 $2 * \sqrt{3}=e^{-t}$
 $dM/dt * \text{Eigen vector Energy}=e^{-t}$
 $1.72=e^{-t}$
 $t=0.809$
 ~ 81
 $1/81=0.012345679$
 This is 8 dimensions $(1+t)^8$
 $(1+t)^3=3$ dimensions

How the Universe Oscillates

$IF A=\pi$
 $0.618/\pi=0.1967$
 $dA/dt=2\pi R$
 $=2\pi$
 $If \pi * x=2\pi$
 $x=2$
 $e^{-1.618}=0.198 \sim 2$
 $y=e^x$
 $dy/dt * dx/dt=1$
 $e^x * 1/x=1$
 $e^x=x$
 $e^x-x=0$
 $x-Ln x=0$
 $x=Ln x$
 $1=1/x$
 $x=1$
 Now,
 Integrate
 $\int dy/dt * \int dx/dt = \int 1$
 $y * x=1$
 $x=1, y=1$ Or, $t=1, E=1$
 And,

$y=e^x$
 $x=1$
 $e^{1.618} * 0.618=e^1$
 $\sin \theta = \sqrt{c/E}$
 $\cos \theta = t/E$
 $||E||t|| \cos \theta = 1$
 $E=1-\cos \theta * \text{freq} * t$
 $\sin \theta = \cos \theta = E$
 $\sin^2 + \cos^2 t = 1$
 $G(E^3)-Ln(\text{freq})=s$
 $F=Ma$
 $P=Mv$
 $E=Mc^2$
 $\text{Temp}=xe^{-t}$

The speed of light is the square of the eigen vector for ets where t is the golden mean function and is equal to its derivative (ie $t^2-t-1=2t-1$)

For the Vector space ,
 $||E||t|| \cos 60 = E * 1/t * 1/2 = 1/2$
 $1=dM/dt \cos 60 = t/E$
 $dM/dt=1 \ \& \ c=3$
 $c=s/t=d/0.222$
 $d=0.666=G=EVIL, EVIL, EVIL$

Space

The whole universe can be reduced to vectors energy and time. The space vector is the cross product of E-t

$||E||t||s|| \sin 60 = 0.866$
 $s=0.866$
 $E=1/t$
 $t^2-t-1=1/t$
 $t^2-t-(1/t)-1=0$
 $Lett=1$
 $E=3=c=ds/dt$
 $E=ds/dt=c$
 $E=c$
 $Mc=1$
 $c=3$
 $M=1/3$
 $M=1/3 * 4.486=1.5$ Mass Gap

Time Travel is Possible at E=t

TIME STOPS AT E=1/t

$E = \sqrt{3}$
 $t = 1/\sqrt{3}$
 t is the inverse of E, Therefore time stands still this Hebrew Year
 $5774 = 1/\sqrt{3}$
 $0.5774/0.500 = 1.1548$
 $1/1.1548 = 0.866 = \sin 60$ degrees
 From above:
 $ME = t$
 $t = \text{eigenvector}$
 $ME \sqrt{3} = t * \sqrt{3} \quad 3M = 1$
 $M = 0.333$
 From above:
 $dM/dt - M = \pi$
 $2 + 0.333 = \pi * \text{cuz}$
 $2.333 = \pi(\pi - e)$
 $= 1.333 = s$
 So $E = \sqrt{3}$, $t = 1/\sqrt{3}$, $s = 1.333$
 $R = 1.9085$
 $R/\sqrt{3} = 1.1032 \sim 1/9 = 1/c^2 =$

Time and the Speed of Light

$E = t/[100 * 1/\pi]$
 $1/c^4 = 1 + 7e^t$
 $1/81 = (1 + 7e^t) = t + dt/dt + dt/dt + \dots dt/dt (1+t)^n = 1$
 $(1 + 1/81)^{11} = 1/E = t$
 Cusack's minimum time and energy equation yields speed of light
 $(t + t/c^4)^{11} = (1 + 7e^t) = 1/E = t$
 Now, $E = Mc^2$
 $1/(1 + e^t) = Mc^2$
 $1/[(1 + 1/c^4)^{11}] = Mc^2$
 $1/t = Mc^2$
 $E = 1/t$
 $1 - 1/7 = -0.857 = E$
 $6/7 = E = \text{Evil Universe} = \sin x$
 $1/7 = \text{Good} = \cos x$
 $1/7 = \text{True} / \text{Christ} = \text{Jesus}$
 $6/7 = \text{Evil} / \text{Christ} = \text{AntiChrist}$
 $1/8 = 1.25 = \text{Jesus}$
 $t = 1.2533 + 6/7 + 1/7 = 2.2533$
 $1/t = 0.444 = E = \text{Evil}$
 $\sqrt{(\alpha^2 + a^2)} = 1/\text{cuz}$

$c = 3.25$
 $c = 13/4$
 $c |D| = 13$
 $1 - 13 = 0.86$
 $E - s = c|D|$
 And,
 $\sqrt{(\alpha^2 + a^2)} = E/\text{cuz}$
 $(\pi - e^1) \sqrt{(\alpha^2 + a^2)} = E$
 $[E - e^1]/E = 1 = (1+t)^{11} = c^4$
 $1.2448 = 1.23 \text{ True}$
 $c^4 - E = E/M$
 when $E = 2$, $t = 1$, triangle
 $Mc^4 - E = E$
 $E' = M(-Ec^4(-E+1))/1$
 $= -M E c^4(1-E)$
 $G = E'' = -ME(1-E)c^4(1-E)^2$
 $G = E''' = -MEc^4(1-E)(1-E)$
 $G = -ME(1-E)c^4(1-E)^2$
 $G = (ME^2 - ME)(c^4(1-E)^2)$
 Take the Ln of both sides, then the derivative:
 $1/G = 1/[ME^2 - ME]c^4(1-E)^2$
 $1.5(ME^2 - ME)c^4(1-E)^2 = 1$
 Let $E = 0.8415$, $c = 3$
 $M = 0.4233 \quad M = \text{cuz}$
 $E = Mc^2$
 $1 = M(0.1967)$
 $c^2 = 0.1967$ (year I was born!)
 $c = 0.444$
 $\text{Omega} = 67 \text{ degrees} = 1.1701 \text{ rads}$
 $F = Ma$
 $= M(a + \alpha)$
 $= M^3$
 $E = 1/M = 1/t$
 $t = M = \text{cuz}$
 $M = 1/7 + 7e^t$
 $t = 1/7 + 7e^t$
 $1 = (1/7 + 7e^t)$
 $1/7^2 = e^t$
 $t = \text{Ln}(1/49)$
 $t = \text{Ln}(0.0204) = \text{Ln}(Y/10)$

$t=3.89 \sim |D|$

 Dimension of property
 Now God and the devil meet at $T = E$
 That is the hinge point
 Q-ED
 $E = y = x/\sin x = 2\text{Pi}$
 $C = 3$
 $Y = e^{\wedge x}$
 $E = x/\sin x \sim \text{csc}(3) = \text{csc}(171.88 \text{ degrees}) = 2.232 \times 10^{\wedge 74}$
 $\text{Vol of ellipsoid} = 200.86 (10^{\wedge 29}) = Y$
 $E/\text{vol} = 248/200.86 = 1.23469 \sim 1/81$
 $1/81 = e^{\wedge 0} + e^{\wedge 1} + e^{\wedge 1} = \dots = 1/7 + 7e^{\wedge 1} = \text{Mass (see above)}$
 Therefore
 $E/\text{vol} = \text{Mass}$
 $E/Y = \text{Mass}$
 $Y = E/\text{Mass}$
 Dampened Sin curve.

It had to because the exponential function $y = e^{\wedge x}$ is robust. A question remains if the plots in the above graph prove that there are other universes which work in reverse or in negative energy?

$a/\sin \theta = a/[b/c] = e^{\wedge x}$
 $a/\sin \theta = e^{\wedge x}$
 $x/\sin x = e^{\wedge x}$
 $x = \text{Ln}(Csc[x])$
 $x = \text{Ln } x = \text{Ln}[\sin x]$
 Let $t = 1, \text{Ln } x = 0$

$x = \text{Ln}[\sin x] x = 1.73 = \text{eigen vector and the side of the } 30\text{-}60\text{-}90 \text{ triangle.}$

This is where the universal parametric equation $y = y'$ and all the physical constants drop out.

The Laplace Transform

For the second order linear differential equation is the famous distance equation in physics.

$d = vit + 1/2 at^{\wedge 2}$
 $s = st + 1/2 s''t^{\wedge 2}$
 $s = 1/2 s''t^{\wedge 2} + st$
 $t = 1$
 $s = 1/2 s'' + s'$

Let $s' = e^{\wedge t}$ & multiply by $(e^{\wedge -t})^{\wedge 2}$
 $1/2 s'' (s')^{\wedge 2} + (s')^{\wedge 3}$
 If $y = y' = y'' = e^{-t}$

Then

$$1/2e^{-t}(e^{-t}) + e^{-t}^3$$

$$=1/2 (e^{-t})^3-(e^{-t})^3$$

Now, Divide by e^{-t}^2

$$s=-(e^{-t})^3$$

$$s'=3/2 *(e^{-t})^2$$

$$s''=1.5 (2)/2(e^{-t})$$

$$=1.5e^{-t}$$

$$\text{Mass Gap}=1.5$$

$$s=s't+1/2s'' t^2$$

$$s=1.5(e^{-t})^2 *t +1/2 (1.5 (e^{-t}))^2t^2$$

$$s/t=s'(e^{-t})+0.75(e^{-t})t$$

Here is why $c=2.9979\sim 3$

$$R \text{ Vector}=\text{SQRT} [3^2+24^2+66^2]=6.,64981$$

$$\text{Resistance } R=0.4233=\text{cuz}$$

$$E=0.8414=\text{Sin}1=\text{Cos} 1$$

$$V=iR$$

$$0.8415/0.4233=198.8$$

$$66.4981/198.8=2.98949\sim 3\sim c=\text{SPEED OF LIGHT}$$

$$y=y'$$

$$E=E'$$

$$dM/dt=E=E'$$

$$\text{Integral } dM/dt=\text{Integral } E'=E$$

$$E=M + C1$$

$$E=M + dM/dt \text{ when } c=3$$

Integrate E parabola

$$x^3-2x^2/2-x=M$$

$$x^3-1/2 x -1=M/2$$

$$6/2 x^2-1=dM/dt$$

$$3x^2-1=dM/dt$$

$$x(x^2-x-1/2)-3/2=E$$

$$\text{But, } E=Mc^2$$

$$c^2=1$$

$$c=1$$

$$C1=2$$

$$x(x^2+3x-1/2)=2+3/2=3.5=dM/dt +\text{Mass Gap}$$

$$-2.5t=3.5$$

$$t=1.4=1+0.40$$

$$x(x^2-1)=2$$

$$x^3-x-20$$

$$x=1=t$$

$$M=0$$

$$M+dM/dt=E \text{ \& } c=3$$

$$E=0+2$$

$$E=2$$

$$\text{The } t=1/\text{sqrt } 3 \text{ and the } E=\text{sin } 60 \text{ deg}=0.866$$

Speed of Light Accuracy

$$c+dV/dt=2.9953+0.8660=2.9953+0.0026=2.99 79 \text{ cf } 2.997929 \text{ OK}$$

$$M + dM/dt=4.486 +2=6.486 2 *0.08660=0.1732$$

$$0.1732/6.486=0.0267$$

$$6.486*0.00267=6.6592$$

$$E=Mc^2$$

$$6.6592 * 2.9979^2=26.9433$$

$$26.9433/26.667=0.0276$$

$$0.9962 +0.00276=0.9990 1 \text{ part in } 1000 \text{ to } 4 \text{ significant digets.}$$

$$F/s=26.667/0.1334=199.9 1 \text{ part in } 1000 \text{ to } 4 \text{ significant digits}$$

$$\text{EigenVector}=\text{sqrt } 3/1=\text{tan } 60 \text{ degrees} / 1=\text{sqrt}3$$

Why is the speed of light $c=3$?

$$E/t=E*1/t=E^2=(\text{sqrt } 3)^2=3=\text{EigenValue}$$

The universe exists where the eigenvalue= c =eigenvector= $\text{sqrt} 3$

Sine Ets= $\text{sqrt} 3$, this is why the speed of light is exactly 3.00000000

Conclusion

We see that Energy, time, space and mass and distance and the speed of light are all interrelated in Astrotheology mathematics.
