The Strengths and Weaknesses of Languedoc-Roussillon SMEs Export

Jalane A*
Paul Valery University-Montpellier III and University of Huelva, Huelva, Public University in Huelva, Spain

Abstract
The growing interest of various economies in increasing and promoting the participation of their SMEs in international trade requires a revival of research into the internationalization processes of companies, especially those of small and medium enterprises. The objective is to provide extensive year and overall theoretical overview of the processes of internationalization of SMEs in Languedoc-Roussillon and, by extension, of those of French companies. From an empirical standpoint, we will verify the factoring that determines the internationalization process followed by these SMEs, according to their organizational structure and intangible considerations, in order to highlight their similarities and differences to from the various theoretical approaches. We will also determine whether firms with a low rate of international export may improve their performance solely through the development and management of some factoring in the Born Globals (internal variables). The export rate associated with international activity makes sense for thesis organisms. In fact, it has become a necessary strategic option in order to offset the drop in demand in exporting countries. In addition, a major challenge is exporting given the stiff competition in international markets from competitors with huge resources and very different export behavior.

Keywords: International new ventures; SMEs; Uppsala; Internationalization; Born global; Export achievement; International entrepreneurship; Export intensity

Introduction
The internationalization of companies is today a phenomenon to which we pay more attention to various fields. Linked to it is one of the leading players in the global economy: small and medium enterprise (SME). In fact, much of the literature has traditionally focused on large multinational corporations with subsidiaries in many countries, lending, except for rare occasions, less attention to small and medium enterprises. This requires a justification for this work which may, in addition complements other recent research on French SMEs.

This is why our main objective is to conduct a study of the internationalization of SMEs Languedoc-Roussillon process. For that, following this introduction, everything is structured in the following paragraphs. First, a theoretical synthesis is carried out on the phenomenon of internationalization of companies, focused on some fundamental aspects that have been following empirical contrast objects. Later, we explain the methodology used throughout the work. After outlining the main results obtained, we will conclude with some conclusions which are highlighted potential contributions of this study as well as some recommendations and avenues for future research.

The Theoretical Approaches to Internationalization

The pioneering work of the Uppsala Model are those of Wiedersheim and Jan-Paul [1] and Johanson and Jan-Erik [2], who consider that many companies are trading their international operations early in their growth, developing a gradual manner their external operations. Due to lack of knowledge of foreign markets, companies start by exporting to neighboring countries that are relatively similar and better known, while passing later by what is called the ’settlement chain’: 1) non-regular exports, 2) export through independent representatives or agents, 3) affiliate sales, and 4) production subsidiary. In each stage two important elements influence: psychic distance (integrated by differences in language, culture, political systems, level of education, level of industrial development, etc.) and the potential market size since the company may prefer to start operations in small markets where one requires less initial commitment of resources, where there is less competition.

The debate over the validity of the Uppsala Model has been the center of some later works in the northern countries. In one of these countries, Bent and Pedersen [3] indicate that the theoretical basis of the model (increased commitment as a result of accumulating knowledge) has not been called into question are for later research. In all cases, the accumulation of knowledge is complemented by views of other possible explanations for the progressive increase in the commitment i.e., exports growth, the need to accumulate sufficient financial resources and a formidable evolution competition.

During this, and the increasing proportion of significant businesses and in particular SMEs, very early in their lives, have an rapid international development, that is to say without going through a consolidation phase of their activities in a local environment, undermines the universality of the traditional model of internationalization in stages of Uppsala. These companies, called ’Born Globals’ or ”International New Ventures” and that their creation dice tend to get a significant competitive advantage in the use of resources and the sale of products in several countries [4] are also defined as being of technological base are small businesses operating in international markets in the first days of their creation [5]. These are companies that through a series of elements grow in other markets in a dynamic way, where is less waiting time for learning and the accumulation of knowledge that can be applied to various productive activities and operations of the organization. For example, the literature emphasizes the fundamental role of the entrepreneur for rapid internationalization of new companies [4,6]...
work studied the internationalization of view of firm age. variables that have been studied as crucial to the internationalization of investments on the competitiveness of companies on foreign markets. The point of research is to generate conclusions about the effect of these companies in their efforts to develop R and D, being the common have generally been associated with the analysis of the actions of the internationalization of businesses. Studies of technological factors [9] and Cantwell [10], the elements of great importance in the three main groups: technological, structural and other intangible factors.

The increase in the number of companies that follow an accelerated internationalization process is mainly characterized by the development of five economic and social factors that encourage the creation of new businesses to international and global vocation from birth. These factors are: existence of new market conditions, technological developments in the field of transport and communication, increased specialization of technical and business skills of local human resources, coordination actions and participation in international networks and the systematic elimination trade barriers.

Obviously, the competitive environment that exists is different from that which was in the early 70s (when the Uppsala model was developed). Indeed, today the role of entrepreneurs is recognized in the literature as a determining factor in explaining the emergence of Born Globals [4,9], which are characterized to have an international mindset and having the majority of international experience that they acquired while working for multinationals in export departments or developing stockists abroad. Thus, in this group are people with a university education, multilingual and with an extensive network of international contacts. All these experiences and their knowledge to determine adequately the conditions in international markets in order to develop a fast and efficient entry.

Considering the premises of the Born Global approach, it is necessary to consider that the internationalization process is not influenced by a model based on geographical distance and cultural differences, it makes more sense to think of a model linked to networks, experience and knowledge of entrepreneurs acquired before the creation of the company.

Once described the characteristics and main differences between the Uppsala model and Born Global approach, it is necessary to identify a number of factors of a different nature that seem to influence the intensity of exporting companies, a influence differs depending on the type of internationalization adopted by the SMEs.

Factors influencing the process of internationalization

The internationalization processes followed by firms are influenced by the interaction of a number of factors, which can be grouped into three main groups: technological, structural and other intangible factors. Technological and structural factors as the work of Vernon, Dunning [9] and Cantwell [10], the elements of great importance in the internationalization of businesses. Studies of technological factors have generally been associated with the analysis of the actions of the companies in their efforts to develop R and D, being the common point of research is to generate conclusions about the effect of these investments on the competitiveness of companies on foreign markets.

Regarding structural factors, one can distinguish a large number of variables that have been studied as crucial to the internationalization of companies. Calof [11,12] studied the size of the company as a decisive factor; Vaupel [13,14] examined the ownership of capital while Uppsala work studied the internationalization of view of firm age.

Compared to other intangible factors, studies on one aspect of intellectual capital indicate that the analysis and management of intangible nature elements is crucial to improve and optimize the competitiveness of enterprises, having a positive effect on the ability innovation and presence in certain markets [15]. In this regard, the study of the internal factors of the organization, such as human capital, which is defined as the set of skills, talents, skills, experience accumulated by an individual and which partly determine their ability to work or produce for itself or others; structural capital (intangible assets) as we wanted to define the body of knowledge that remains in the company at the end of the working day (including organizational routines, procedures, systems, cultures, etc.); and relational capital defined as the set of resources associated with external relations of the company with these customers, suppliers of goods, services or capital are essential to understand the main points of attention for effective development of business activities abroad. Complement in this group of internal factors of intangible nature, we must add other external to the company (externalities) as external demand, domestic demand, the level of competition on the domestic market, geographic location and trade agreements that make it easier and cheaper development of commercial activities outside, causing less uncertainty in target markets because in theory the rules are known and respected by all.

Similarly, other factors beyond the control of the companies are "psychic distance" and "geographical" between them and the client countries. That during these distances are just a fact being the export decision is taken based on information and knowledge available.

The three groups of factors just mentioned are mutually reinforcing to influence the process of internationalization of companies and affect their competitiveness. So, pay attention to the latter as a whole proves fundamental.

Objectives and Methodology of the Research

The geographical scope of our empirical research is the Languedoc-Roussillon region. Two stages will be analyzing the internationalization of SMEs in the region, a descriptive analysis and econometric analysis.

Initially, a descriptive analysis we analyze SME exporters in the region, we based on the data from the survey carried out among these companies. The idea is to assess if they have the necessary elements to properly compete in other markets. The second stage will be a brief analysis econometric data obtained from sample data Born Globals companies say. The objective is to confirm the participation of certain structural factors as catalysts of SME internationalization process of Languedoc-Roussillon and compromise a significant amount of resources on international markets.

To set the object of study population, the first step was to detect the exporting SMEs (firms with less than 250 employees), whose seat is in the Languedoc-Roussillon region, companies that have some experience international marketing and exports represent a significant percentage of their turnover. Our claim was to conduct a structured e through a questionnaire survey, for which we needed a complete listing of these companies. However, the absence of such a document has forced us to develop indirectly. So, first, we made contact with various organizations that we believe could have this kind of data such as: Regional Chamber of Commerce and Industry (RCCI) and Directorate General of Customs and Indirect Taxes (DGDDI).

After developing a first directory, we have refined accordance with the objectives of this work, which gave as a result a population permanently configured by SMEs in 2004. We obtained the collaboration of 61 companies for a confidence interval of 95% with a maximum margin of error of 5%.
Exclusively commercial character and the other 15 belong to the service agribusiness and wholesale trade. It takes more to highlight that 30 region with higher tradition and international presence in namely all companies have a link with two sectors of the Languedoc-Roussillon from a sectorial perspective, in Table 1 we can verify that almost 64% of approach on the main aspects that characterize the group studied. First, we start the explanatory results of empirical research with analysis of SMEs exporters.

Before revealing the results of the investigation, it must first be noted that compared to the territorial distribution of enterprises, the majority belong to the Hérault department with 62.3% of the total, followed by 14.8%, confirming them as the most active and dynamic area of the region.

As for the size of the company, it was observed that the number of staff 61.7% of companies is between 1 and 10 employees for the operation of all of their activities. Also, it may be noted that the turnover of 41% of these SMEs is less than 1 million.

As for variables directly related to the international aspects, it stands in the first place and as reflected in Table 2, the majority of companies intend to export more than 20% of their production, which indicates that they have a presence International consolidated enough (Table 2).

Regarding the main obstacles faced by companies in their internationalization process (Figure 2), it was observed that as the first impediment complexity of regulations and administrative standards, followed by the lack of profitability of operations due to costs and the e overstated value of the euro. It should not be forgotten that the sector with the largest presence in foreign markets is the food industry, which implies the need for a series of certifications for marketing their products, such as phytosanitary certificates or other specific each country. In return, the remaining obstacles were not considered weight for export impediments, indicating the veterance of SMEs abroad (Figure 2).

In relation to the factors that influence the decision to undertake an international activity, we first need to distinguish the increase in turnover with 88.4% of affirmative responses, followed by the level of demand in the target countries/markets with 78.7% and finally the risk diversification (73.8%). Regarding human resources or organizational structure, it was found that 55.7% of companies do not have an export department as such (exports are carried out by commercial operation of all of their activities). Also, it may be noted that the service sector and research and development (Table 1).

Results and Discussion

Before revealing the results of the investigation, it must first be noted that compared to the territorial distribution of enterprises, the majority belong to the Hérault department with 62.3% of the total, followed by 14.8%, confirming them as the most active and dynamic areas of the region.

Descriptive analysis of SME exporters

We start the explanatory results of empirical research with analysis from a variety of variables that allow us to make an initial descriptive approach on the main aspects that characterize the group studied. First, from a sectorial perspective, in Table 1 we can verify that almost 64% of all companies have a link with two sectors of the Languedoc-Roussillon region with higher tradition and international presence in namely agribusiness and wholesale trade. It takes more to highlight that 30 businesses (49.2% of total) produce and market products, 16 have an exclusively commercial character and the other 15 belong to the service sector and research and development (Table 1).

As for the size of the company, it was observed that the number of staff 61.7% of companies is between 1 and 10 employees for the operation of all of their activities. Also, it may be noted that the turnover of 41% of these SMEs is less than 1 million.

As for variables directly related to the international aspects, it stands in the first place and as reflected in Table 2, the majority of companies intend to export more than 20% of their production, which indicates that they have a presence International consolidated enough (Table 2).

Secondly, and from a geographical point of view, more than 86% of companies consider the 15 countries of the European Union as an area of strategic interest to market their products, followed by North America and Asia-Pacific. No doubt a choice that comes from the intention that these SMEs give the purchasing power and the level of demand for French products in these countries, but also because of the fact that wine products are the most exported by the region Languedoc-Roussillon, which explains 73.8% of the SMEs surveyed do not consider North Africa and the Middle East as target markets, the opposite of Asia; especially taking into account the considerable increase in the demand of French wine in China and Japan (Figure 1).

Regarding the main obstacles faced by companies in their internationalization process (Figure 2), it was observed that as the first impediment complexity of regulations and administrative standards, followed by the lack of profitability of operations due to costs and the e overstated value of the euro. It should not be forgotten that the sector with the largest presence in foreign markets is the food industry, which implies the need for a series of certifications for marketing their products, such as phytosanitary certificates or other specific each country. In return, the remaining obstacles were not considered weight for export impediments, indicating the veterance of SMEs abroad (Figure 2).

In relation to the factors that influence the decision to undertake an international activity, we first need to distinguish the increase in turnover with 88.4% of affirmative responses, followed by the level of demand in the target countries/markets with 78.7% and finally the risk diversification (73.8%). Regarding human resources or organizational structure, it was found that 55.7% of companies do not have an export department as such (exports are carried out by commercial operation of all of their activities). Also, it may be noted that the service sector and research and development (Table 1).

To support agencies for export, it was observed that 9.8% of companies know no external promotion of existing institutions

Results and Discussion

Before revealing the results of the investigation, it must first be noted that compared to the territorial distribution of enterprises, the majority belong to the Hérault department with 62.3% of the total, followed by 14.8%, confirming them as the most active and dynamic areas of the region.

Descriptive analysis of SME exporters

We start the explanatory results of empirical research with analysis from a variety of variables that allow us to make an initial descriptive approach on the main aspects that characterize the group studied. First, from a sectorial perspective, in Table 1 we can verify that almost 64% of all companies have a link with two sectors of the Languedoc-Roussillon region with higher tradition and international presence in namely agribusiness and wholesale trade. It takes more to highlight that 30 businesses (49.2% of total) produce and market products, 16 have an exclusively commercial character and the other 15 belong to the service sector and research and development (Table 1).

As for the size of the company, it was observed that the number of staff 61.7% of companies is between 1 and 10 employees for the operation of all of their activities. Also, it may be noted that the turnover of 41% of these SMEs is less than 1 million.

As for variables directly related to the international aspects, it stands in the first place and as reflected in Table 2, the majority of companies intend to export more than 20% of their production, which indicates that they have a presence International consolidated enough (Table 2).

Secondly, and from a geographical point of view, more than 86% of companies consider the 15 countries of the European Union as an area of strategic interest to market their products, followed by North America and Asia-Pacific. No doubt a choice that comes from the intention that these SMEs give the purchasing power and the level of demand for French products in these countries, but also because of the fact that wine products are the most exported by the region Languedoc-Roussillon, which explains 73.8% of the SMEs surveyed do not consider North Africa and the Middle East as target markets, the opposite of Asia; especially taking into account the considerable increase in the demand of French wine in China and Japan (Figure 1).

Regarding the main obstacles faced by companies in their internationalization process (Figure 2), it was observed that as the first impediment complexity of regulations and administrative standards, followed by the lack of profitability of operations due to costs and the e overstated value of the euro. It should not be forgotten that the sector with the largest presence in foreign markets is the food industry, which implies the need for a series of certifications for marketing their products, such as phytosanitary certificates or other specific each country. In return, the remaining obstacles were not considered weight for export impediments, indicating the veterance of SMEs abroad (Figure 2).

In relation to the factors that influence the decision to undertake an international activity, we first need to distinguish the increase in turnover with 88.4% of affirmative responses, followed by the level of demand in the target countries/markets with 78.7% and finally the risk diversification (73.8%). Regarding human resources or organizational structure, it was found that 55.7% of companies do not have an export department as such (exports are carried out by commercial operation of all of their activities). Also, it may be noted that the service sector and research and development (Table 1).

To support agencies for export, it was observed that 9.8% of companies know no external promotion of existing institutions
in Languedoc-Roussillon, while 26.2% had never attended any of the various programs offered. The most known organisms remain Ubifrance and Sud de France Export, not only for their excellent reputation for the quality of their services, but also to their presence in the majority of countries that may be of interest to the French company in general.

Support programs for the internationalization most requested by companies of the region are those relating to the participation in international fairs and exhibitions (73.8%), followed by programs that promote inter-contractors meetings, then in a last FASEP we find the system of guarantees and FORMATEX specialized training programs.

The results of the survey, only 24.6% of companies prefer to start their export activities gradually, while the remaining 75.4% perform a rather entrepreneurial management internationalization without giving any priority to geographical proximity, because according to the survey client countries exporting companies of Languedoc-Roussillon are those of the European Union, North America and Asian countries

Thirdly, therefore, we can say that their internationalization process is totally opposed Theoretical Model in Uppsala, selection of European countries is because they are considered an extension of the local or national market. Regarding socio-cultural differences, they seem not to influence the decision to export of these SMEs, which leads us to deduce once again that it is these behaviors that characterize the companies referred Born Globals.

It may seem contradictory us that the Bron Globals companies represent 75.4% of the sample firms, while only 44.3% of the total have export service in their organizational structure, the explanation comments provided by the companies is that they realize all of their activity abroad, that should not be interpreted as a lack of specialized human capital, but just the opposite, the knowledge and the experiences are part of the intangible capital of SMEs, which integrate their structure and consolidate as a know-how and expertise necessary for the operation of the company’s business (Table 3).

In conclusion, it is clear that exporting SMEs in the Languedoc-Roussillon region is mainly characterized to have an average technological level, have a high level of relational capital and having a predominantly specialized in international trade workforce; Add to this that they attach no importance to the geographical distance and socio-cultural differences when deciding their entry into foreign markets, their decisions are often motivated by rational reasoning which aims to increase turnover of the company and to diversify risk, and will be guided by the level of external demand in target countries and their purchasing power.

**Econometric Study**

In this part we will try to verify the role of certain structural factors in the process of SME internationalization Born Globals Languedoc-Roussillonnais.

With characteristics similar to the previous one, this variable refers to the geographical gap between business and client countries. This is a variable that has been defined in the Theory Uppsala, described as an important factor in international trade activities, mainly for new businesses [1,2].
H4: The geographical distance between SMEs and target-country markets, has no influence on the exporting intensity.

Relational capital: The influence of relational capital especially between creating new businesses, is determined by any relationship with the environment that adds value to the organization. The role of the entrepreneur is significant extremely when establishing and developing external relationships of the company, often using their personal networks [26] having social networks of special importance, social since capital is an importance source of legitimacy and knowledge required for success internationally [27] whether for Born Globals [4,16] or to companies that adopt a gradual process towards internationalization. Several research studies have claimed that companies that are share of a social network reliable pour augmenter their competitive advantage, and that the strategic groups generally improve corporate performance, particularly for the establishment of new SMEs [28].

H5: The relationship capital exporting SMEs, has a positive effect on the intensity Exporting.

Human capital: From a theoretical point of view of, there are many studies-have that examined the impact of specialized staff (human capital) having experience in international trade, the internationalization of a business process [29-31] being white the most significant research those made by authors decision [7,32,33] to confirm the positive role of staff specialized in the international expansion of companies.

H6: The human capital has a positive influence on the export intensity of the companies

The technological level: The technological factor is regarded significant element for business year we competitiveness international markets [34,35]. Benjamin et al. [7] demonstrated that differences in competitive advantages entre wide and small businesses in foreign markets fell, and hold a competitive advantage internationally depends increasingly specific business assets [36,37]. So we can deduce the competitive international calls for more efficiency and effectiveness in the management of innovation processes, research and development that so companies can guarantee a successful presence in foreign markets [38].

H7: The technological level of the company has a positive influence export intensity.

The geographical rental of the company: This is a concept that is rooted in economic geography (spatial economy or economy of the territories), in fact the position of the company in terms of territoriality affects export intensity. At the theoretical level, a recent research work conducted by Stephanie et al. [39] have been examined and determined empirically the role of geography in the international development of businesses Born Globals. The general feeling from the study emerges that is that from an ecological point of view of local natural resources are indeed a significant factor in companies’ internationalization process, confirming the results of numerous studies that have tried to study the impact of the geographical location of the company is able to create and sustain competitive advantage in an era of economic globalization [39-44].

Also, industrial groupings (clusters)-have a catalytic role in the internationalization process, local and regional business through networks that allow players to develop interactions [44], and find an importance source of information, skills, knowledge of markets and opportunities to the international business [45].
equal among low export-intensive companies (86.7%) than intensive (87.0%) (Table 5).

The four variables that were previously analyzed won’t be regarded logistic regression model for the, since none of them: has a significant association with the response variable (Table 6).

Regarding relational capital, there is a significant association with the export intensity (p<0.01), as 82.6% of companies intensive-have in even entre those with low intensity we can see that difference is as significant as crucial to the internationalization of enterprises (49.3%) (Figure 4).

They review the other hand companies-have that specialized human capital is more common among the high export-intensive businesses (50%) against the 26.7% among those with low intensity (Figure 5).

In terms of technological product level, Chi-square test p=0.048 indicated which confirms the combination of this factor with the exporting intensity. Between enterprises was observed with high export intensity 42.2% have an advanced level of technology while in the low-intensity group this percentage is 33.3%. It reviews the other hand, 22.2% of companies with artisan production system-have strong export intensity.

The variable “industry” indicated a weak relationship entre export intensity and industry (p=0.607), being white sectors that most associate associated with strong export intensity and agribusiness chemical industry, wholesale trade and recreation, with a difference of 10.2% for the food industry and the chemical industry (43.5%=high intensity, low intensity=33.3%) and 11.6% for industry research and development and manufacture of machinery (21.7%=high intensity, low intensity=33.3%), profit they remain insufficient differences to be reliable to include this variable in the logistic model.

Furthermore, there is no relationship entre firm size and export intensity of SMEs in the area. This fully justified the level of significance p=0.290 Observed chi-square test the companies were grouped according to the number of their workforce. (≤ 10 employed small businesses and medium enterprises employed ≥ 10).

According to the value observed significance in the Chi-square test, the most significant explanatory variables to predict the intensity of export Languedoc-Roussillon SMEs are: relational capital, the technological level of the company/product and human capital (Table 7).

 Companies with a specialized human capital were 5 times more likely to have a strong export intensity (or=5.34) compared to companies without this factor, it is significant to notes than the total of SMEs that factor, 81.5% also HAD Some relationship capital, while specialized Among Those without human capital, less than half (38.2%) were not factoring relational, a very significant difference (p=0.094 Chi-square with the test). However, two factors are interrelations with a 90% confidence interval (Table 8).

Candidate variables for the logistic regression model, we get the following equation:

\[
\text{Log (p/(1-p))} = -3.191 + 1.674 \text{ (CapH)} + 1.813 \text{ (GARP)} - 1.760 \text{ (TecnAv)} + 1.476 \text{ (TecnIt)}
\]

Gold:

CapH: Takes 1 when the value of the company has the specialized human capital, and 0 in the opposite case.

GARP: Takes the value of 1 when the company has the relational capital, and 0 in the opposite case.

TecnAv and TecnIt: Take the value of 1 and 0 when the level of technology is advanced, 0 and 1 for intermediate levels 0 and 0 if the level is basic technological craft gold.

Conclusions

The present work tried to achieve achievement and Increase our understanding of the internationalization process followed us by SMEs, taking into account different factoring that influences their involvement in international trade activities. Although currently the Uppsala model and approach of Born Globals provide us the explanation of described the processes, and it seems that having operate some kind of factoring is what really olefins corporate commitment abroad.

From the descriptive analysis the carried out it was observed that a significant number of low-intensity export SMEs have neither the human capital necessary relational gold for an adequate level of competitive in international markets. From reviews another perspective, the econometric study was able to determine that some structural elements EMS Born Globals are essential to have intense year presence in foreign markets and the therefore in Greater commitment on their export activities. However, we can confirm that companies have an international position strong are those with a set of structural factoring, human and relational.

The main difference entre les low export intensity SMEs are the Born Globals is the importance to the grant they socio-cultural and geographical distance in terms of perception of risk, it has been demonstrated that thesis are factoring that negatively international business can influence.

Proposals and Recommendations

One of the main needs of exporting SMEs in the area a concerns their need to strengthen their strategic positioning. The introduction of some improvements in their organizational aspects Will enable the conversion of some or even productive-technological capabilities to accomplish achieve better results in foreign markets, and promote the adoption of a greater level of compromised through innovation and improving their technological base. It is the therefore appropriate to continue to invest in the establishment and development of assets in the forefront of innovation to supporting the internationalization of the company.

Internally, it seems appropriate to promote the specialization of tasks related to export grouped in departments or divisions with some autonomy. The presence of such organizational units implies has international engagement Greater. SMEs should be provided with a potential of more specialized and trained especially in foreign trade, with functions that go beyond the simple contact with foreign customers or to fulfill specific paperwork, customs formalities (etc.), goal also should be more Involved in the development of the international strategy of the company and the realization of market research.

Externally, and the therefore closely linked to the mechanisms of production and international distribution should be striving for greater control and less vulnerable position of the company internationally it markets through the establishment of exclusive distribution networks, as well as greater use of innovative forms of inter-firm cooperation as franchises, joined ventures (joint ventures) and business and technological agreements. Some of these organizational formulas allow deepening the relationship with foreign distributors, which seems
especially suitable and necessary for SMEs, qui usually do not-have the resources requested by international the activity.

However, it remains significant logistical and supporting infrastructure of various institutions and public agencies (Ministries, Urbifrance, Sud de France Export, the Chambers of Commerce, industry associations, etc.) that can act at several levels: by training, promoting the learning of other languages, prepaid specialists in international trade and promoting access to economic aid. For information diversifying and again more services free by the specialized agencies and sales offices outside network, facilitating access to databases, conducting seminars is external marketing and new opportunities investment by geographical area, as well as promotional work by developing formulas that facilitate the integration of businesses into international trade networks (trading companies, export associations, sectoral associations of exporters, etc.) not to mention the financial and fiscal aspects with the removal of international dual taxation, improving the tax treatment received by direct investment, subsidy insurance cover s that the business risk; and in general a more active participation of banks in the SME internationalization process.

OMICS International: Publication Benefits & Features

Unique features:
- Increased global visibility of articles through worldwide distribution and indexing
- Showcasing recent research output in a timely and updated manner
- Special issues on the current trends of scientific research

Special features:
- 700 Open Access Journals
- 50,000 Editorial team
- Rapid review process
- Quality and quick editorial, review and publication processing
- Indexed at PubMed (partial), Scopus, EI & Scopus, Index Copernicus, Google Scholar etc.
- Sharing Option: Social Networking Enabled
- Authors, Reviewers and Editors rewarded with online Scientific Credits
- Better discount for your subsequent articles
