

Current Need for Fast and High Quality Publication on Medical Sciences

Moges Woldemeskel*

Associate Professor of Veterinary Pathology, University of Georgia, USA

Infectious and non-infectious diseases remain the world's leading cause of death, accounting for tens of millions of deaths each year. New and emerging diseases are daunting challenges to human health. Globalization has led to faster transportation, thereby increasing the spread of diseases. Nowadays, outbreaks of pestiferous emerging diseases encompass the entire world in unprecedented speed demanding a quick response by the medical professionals to save lives. Therefore, physicians are challenged to acquire valid up-to-date scientific information and provide advanced and expedient medical care to patients. This could be achieved only through a sound scientific medical research, the results of which is essential to undertake necessary measures against diseases in the routine day to day clinical practices. Scientific research and discovery are progressing at unprecedented speed to address the need for timely and valid scientific information.

How could we keep our need for up-to-date scientific information in pace with such surge in progress of research in medical sciences? Undoubtedly, at this juncture of information era, fast and quality scientific information-exchange is imperative to cope up with the current momentum of scientific development. Online electronic journals provide a fast and easily accessible means of scientific information-exchange at any place, any time and at easily affordable or no costs. OMICS Publishing Group is one among the leading Open Access publication models which enable the dissemination of quality research articles to the global scientific community through quick online reviewing process. Appropriate and timely research articles help clinicians to appreciate the concepts being developed and judge the

extent to which the results can be applied in their practices. The research findings provide basis on which clinical actions can be planned and implemented. Journal of Clinical and Experimental Pathology (JCEP) of the OMICS Publishing Group is an open-access peer-reviewed medical journal, which publishes such high quality articles in clinical and experimental medicine. The articles are published following a rigorous peer-review process managed by editorial team of global leading experts (<http://www.omicsonline.org/editorialboard/JCEP.php>) in the field of pathology and clinical medicine. Hereby, OMICS/JCEP invites medical and biomedical scientists to submit their research works on clinical and experimental medicine to JCEP for a high quality, fast, peer-reviewed and reliable open-access online publication.
