To whom it may concerned,

I am taking great pleasure in writing this letter of recommendation for Hereditary Genetics: Current Research. As an editor of this journal, I am writing the recommendation with great sincerity and strongly recommend this journal to be indexed in PubMed Central.

Hereditary Genetics: Current Research-open access gives a worldwide audience, larger than that of any subscription-based journal, barrier-free access to research on Hereditary genetics. Furthermore, Hereditary genetics offers increased convenience, reach, and retrieval power, thus improving the visibility and impact of its published work. Hereditary genetics - open access eliminates the need for permissions to reproduce and distribute content, which increases the availability of these key resources. Hereditary genetics and OMICS Publishing Group are ardent about Open Access and strongly believe that removing barriers to accessing research published online will greatly aid to the progress of research within scientific and technical disciplines.

The editorial board members and journal staff have worked very hard for the journal to establish its high professional standing and there by recommending this journal to be indexed in PubMed.

The journal includes a wide range of fields in its discipline to create a platform for the authors to make their contribution towards the journal and the editorial office promises a peer review process for the submitted manuscripts for the quality of publishing. Journal staff and editorial board members have worked very hard for the journal to establish its high professional standing and reputation.

Hereditary Genetics: Current Research is an Open Access journal. It aims to publish most reliable and complete source of information on the discoveries and current developments in the mode of original articles, reviews, case reports, short communications, etc. in all areas of the field and making them freely available through online without any restrictions or any other subscriptions to researchers worldwide. Abstracts and full texts (HTML, PDF, XML format Digital Article and Audio Version) of all articles published by HCR are freely accessible to everyone immediately after publication.

I am firmly convinced that Hereditary Genetics: Current Research should be indexed in PubMed Central. Your favorable consideration of this admission will be highly appreciated.

Truly, yours

A handwritten signature in blue ink that reads "Juan Ren". The signature is written in a cursive style and is placed on a light blue rectangular background.
