

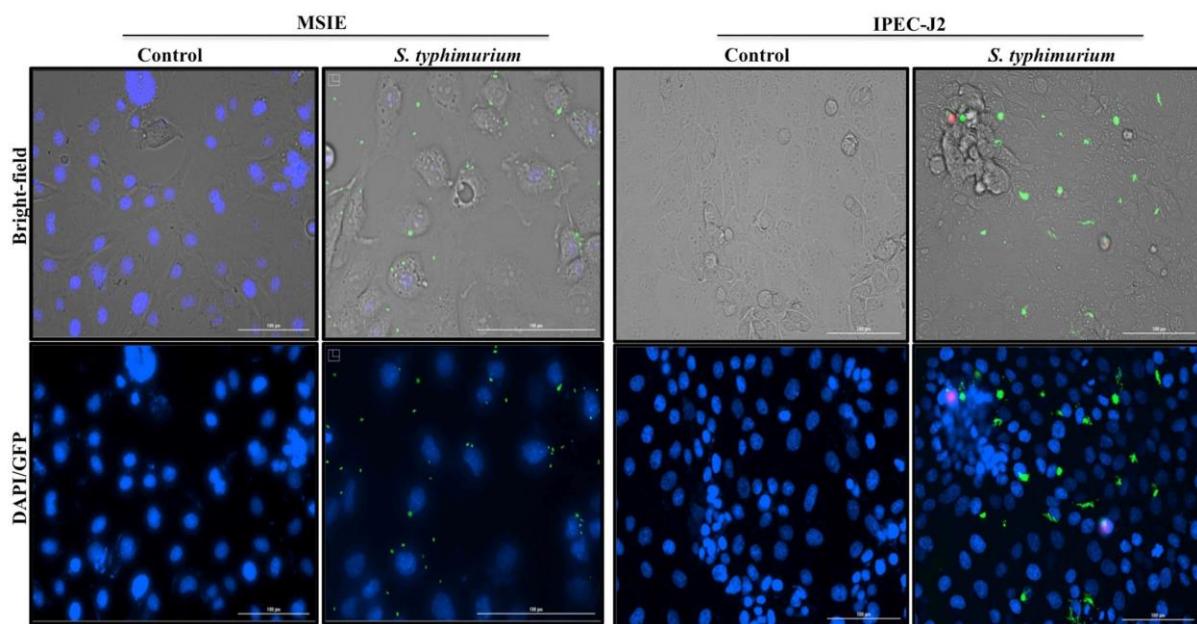

**Figure S1:** Characteristic features of LTH and SHZ-2 rice bran varieties.

**Figure S2:** *S. typhimurium* replication profile.

Invading *S. typhimurium* replicate better in IPEC-J2 cells compared to MSIE cells. Images are representatives of three separate fluorescence infection experiments comprising at least three randomly selected fields of view per infection.

**Table S1:** Median-scaled normalized relative abundance (RA) and fold differences between metabolites detected in galactolipid and phospholipid sub-metabolic pathways of lipid metabolism in LTH and SHZ-2.
